

Psychology Lab Report Template

Title

Abstract

About 100 words, have a clear, concise overview of your research project it should include your objectives, methods, results & conclusion

Introduction

Say **what** is being investigated and **why this is important**. Have a short review of the topic area, becoming more focused nearer the end, so that it goes into exactly what your research question is and ending specifically on your **hypotheses**. In the introduction you may highlight previous research findings and any other relevant information which would help the reader understand this current study is important.

You should **end** your Introduction with hypotheses.

Method

Very precise part.

Use different sub headings:

- Participants – number, mean, median and range of age, gender, where they were recruited
- Materials – what was used in detail
- Experimental Design
- Procedure – what you did in sufficient detail so someone else can follow it exactly. At the very end explain how and what was calculated to get statistical data.

You should outline the procedure used in a concise manner which covers all essential details.

Results

Don't just put in graphs and tables, you need to briefly describe. Results should only have data, interpretations of what the data means is written in the discussion section

Discussion

Begin by briefly state key findings, were they consistent with the hypotheses

- DO NOT repeat your results - give enough information to make the links that relate to your research question.
- If possible, a brief discussion similarities and differences between your findings and previous research may be useful.
- Try to provide an overview of the whole project from a constructively critical approach, highlighting the advantages and disadvantages your methodology
- At the end of the discussion when writing about limitations, suggest some future recommendations and provide a conclusion in a separate section after discussion
