prejudices the achievement of the initial goals and impairs the user's evolution bringing potential negative reflections. Currently there are few specifications and modeling languages that allow the creation of a system of rules to serve as the basis for a gamification engine. Consequently programmers implement gamification in a variety of ways undermining any attempt at reuse and negatively affecting interoperability. Next Generation Applications and Implementations of Gamification Systems synthesizes all the trends, best practices, methodologies, languages and tools that are used to implement gamification. It also discusses how to put gamification in action by linking academic and informatics researchers with professionals who use gamification in their daily work to disseminate and exchange the knowledge, information and technology provided by the international communities in the area of gamification throughout the 21st century. Covering topics such as applied and cloud gamification, chatbots, deep learning and certifications and frameworks, this book is ideal for programmers, computer scientists, software engineers, practitioners of technological companies, managers, academicians, researchers and students.

Psychology in Contemporary China L. B. Brown, 2013-10-22 Psychology in Contemporary China focuses on the advancement of psychology in China and the different areas to which this field is applied. The book proceeds by outlining the evolution, nature and characteristics of Chinese psychology. The text then points out that studies on this discipline are generally difficult because of the lack of publication of resources in English. The process of learning this field is often done through visitations with specialists going to China to conduct research and lectures. The text investigates the evolution of psychology in China as well as its progress through education. The relationship of this discipline with political and social concerns is highlighted and the progress of this field in universities in China is emphasized. The practice of psychology in China is somewhat limited. This lack is expressed by the fact that psychologists avoid questions that have political content. An examination of the attitudes of Chinese is also presented and their views on individuality, self-criticism, violence, child rearing, religion and modernization are discussed. The book is of great importance for scholars and readers who research on the evolution, growth and contributions of psychology to society.
