The Sanitation Triangle Taro

Yamauchi, Seiji Nakao, Hidenori Harada, 2022-02-28 This open access book deals with global sanitation where SDG 6.2 sets a target of enabling access to sanitation services for all but has not yet been achieved in low and middle income countries. The transition from the United Nations MDGs to the SDGs requires more consideration based on the socio-cultural aspects of global sanitation. In other words, equitable sanitation for those in vulnerable situations could be based on socio-cultural contexts. Sanitation is a system that comprises not only a latrine but also the works for the treatment and disposal of human waste. Sanitation systems do not function by themselves but have significance only through social management. The process of decision making also largely depends on socio-cultural conditions and the importance of sanitation needs to be socially acknowledged. The health benefits of sanitation improvement among the significant contributions of sanitation also need to be considered in the socio-cultural milieu. Further, the social culture itself is affected and potentially even created by sanitation. In this context, more progress on the improvement of sanitation requires a more holistic approach across disciplines. In this book, we present the concept of the Sanitation Triangle which considers the interconnections of health, materials, and socio-culture in sanitation as a holistic approach and the case studies based on the Sanitation Triangle by diverse disciplines such as Cultural Anthropology, Development Studies, Health Sciences, Engineering, and Science Communication. By the deep theoretical examinations and inter dialogues between the different disciplines, this book explores the potentialities of interdisciplinary studies on global sanitation.

Metric Handbook Pamela Buxton, 2021-11-25 The Metric Handbook is the major handbook of planning and design data for architects and architecture students with over 100,000 copies sold to successive generations of architects and designers. It remains the ideal starting point for any project and belongs in every design office. The seventh edition references the latest regulations and construction standards and includes new chapters on data centres and logistics facilities alongside basic design data for all the major building types. For each building type, the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of. As well as buildings, the Metric Handbook deals with broader aspects of design such as materials, acoustics, and lighting and general design data on human dimensions and space requirements. The Metric Handbook is the unique reference for solving everyday planning problems.

Rethinking Faecal Sludge Management in Emergency Settings Fiona Zakaria, 2019-07-24 The development of technology in the emergency sanitation sector has not been emphasised sufficiently considering that the management of human excreta is a basic requirement for every person. The lack of technology tailored to emergency situations complicates efforts to cater for sanitation needs in challenging humanitarian crisis. Concerns persist on the lack of faecal sludge management that considers the whole sanitation chain from containment until treatment. This study focused on the

development of a smart emergency toilet termed the eSOS emergency sanitation operation system smart toilet to address the limitation in technical options This toilet is based on the eSOS concept that takes into account the entire sanitation chain This study also addresses the limited time for planning in emergencies by developing a decision support system DSS to help quick selection of optimal sanitation options The aim was to enable users of the DSS to plan their emergency sanitation response within the shortest time possible The study aims to contribute toward a better emergency sanitation response by application of technology advances
