FinTech in Financial Inclusion: Machine Learning Applications in Assessing Credit Risk Majid Bazarbash, 2019-05-17 Recent advances in digital technology and big data have allowed FinTech financial technology lending to emerge as a

potentially promising solution to reduce the cost of credit and increase financial inclusion. However, machine learning ML methods that lie at the heart of FinTech credit have remained largely a black box for the nontechnical audience. This paper contributes to the literature by discussing potential strengths and weaknesses of ML based credit assessment through 1 presenting core ideas and the most common techniques in ML for the nontechnical audience and 2 discussing the fundamental challenges in credit risk analysis. FinTech credit has the potential to enhance financial inclusion and outperform traditional credit scoring by 1 leveraging nontraditional data sources to improve the assessment of the borrower's track record 2 appraising collateral value 3 forecasting income prospects and 4 predicting changes in general conditions. However, because of the central role of data in ML based analysis, data relevance should be ensured especially in situations when a deep structural change occurs when borrowers could counterfeit certain indicators and when agency problems arising from information asymmetry could not be resolved. To avoid digital financial exclusion and redlining variables that trigger discrimination should not be used to assess credit rating. [Siebel SOA & Fusion Blackbook](#), **Managing Operational Risk** Douglas Robertson, 2016-02-23. Operational risk is the risk of loss from inadequate or failed internal processes, people and systems or from external events. This book explores the different types of operational risk that threaten financial institutions and focuses on practical due diligence methodologies that can be used to identify these risks before it is too late.
