#### The Purpose of These Questions

These are typical exam questions from Chapter 1 of the textbook. These exact questions might not be on your exam, but if you research and find the right answers to these questions, that should be good preparation for a real exam. (It's also possible that some of this material was not covered in your class.) At the moment there are **11** short answer questions and **19** multiple choice questions in this file.

#### Short Answers

- Describe one good method for precisely specifying *what* a function must do, without indicating *how* the function accomplishes its work. Provide an example, using a small function.
- What is a precondition? What is a postcondition?
- It's recommended that the precondition be checked at the start of a function. What's a good approach if a function discovers that its precondition is not true?
- Is it always possible for a function to check that its precondition is true?
- Suppose that you accidentally call a correctly implemented function, but the precondition is false. Is the function guaranteed to halt with a nice message? Is the function allowed to erase everything on your hard drive?
- Write the first few lines of this function so that it uses the assert facility to check its precondition:

```
void exam(int i)
// Precondition: i is not equal to 42.
...
```

- Give a concise formula that gives the approximate number of digits in a positive integer. The integer is written in base 10.
- Why is the order of an algorithm generally more important than the speed of the processor?
- Convert each time formula to the best possible big-O notation. Do not include any spurious constants in your big-O answer.
