Juan J. Munoz-Perez,Luis Moreno,2021-09-08 Erosion is experienced by most coastlines worldwide and it is usually attributed not only to sea level rise but also to the retention of sand in dams the occupation of dry beaches by urbanized areas the mining of sand as a building material for construction and so on Beach nourishment has evolved as the favored erosion mitigation strategy in many areas of the world The increasing number of people living on the coast the safety of those people and the high values of coastal properties are all factors that have made beach nourishment a cost effective strategy for managing erosion in many locations However a new scenario of sand scarcity and environmental care has arisen in recent decades There have been many different and interesting cases of various aspects of beach nourishment in recent years The purpose of this invited Special Issue is to publish the most exciting experience and research with respect to this topic Thus novel techniques for designing executing and controlling these kinds of works as well as different case studies and their monitoring results and conclusions have been included in order to present an updated state of the art for marine scientists researchers and engineers *Good Practice in Archaeological Diagnostics* Cristina Corsi,Božidar Slapšak,Frank

Vermeulen,2013-12-11 This volume represents the most important deliverable of the European funded project Radio Past

www.radiopast.eu It is intended to disseminate the key results achieved in the form of methodological guidelines for the application of non-destructive approaches in order to understand, visualize and manage complex archaeological sites in particular large multi-period settlements whose remains are still mostly buried. The authors were selected from among the project research staff but also from among leading international specialists who served as speakers at the two international events organized in the framework of the project: the Valle Giulia Colloquium of Rome 2009 and the Colloquium of Ghent 2013 and at the three Specialization Fora, the high formation training activities organized in 2010, 2011 and 2012. As such, the book offers contributions on diverse aspects of the research process: data capture, data management, data elaboration, data visualization and site management, presenting the state of the art and drafting guidelines for good practice in each field.

The objective of spatial analysis techniques is to describe the patterns existing in spatial data and to establish preferably quantitatively the relationships between different geographic variables. The notion of spatial analysis in a Geographic Information Systems (GIS) environment encompasses the idea of integrating spatial data and alphanumeric attributes and translating it into a series of functions related to selection and data search on the one hand and with modeling on the other. There have been substantial advances in spatial analysis techniques in GIS, mainly in the form of more faithfully apprehending the relationships inherent to the geographic phenomenon, something that was proven impossible to do with non-spatial techniques. Nowadays, spatial analysis involves a set of techniques used to analyze and model variables with distribution in space and/or time. The new era of spatial analysis must also consider the possibilities of integrating artificial intelligence in simulation/geosimulation processes in computerized environments: geocomputation in close relationship with models developed in real situations. GIS have emerged as useful tools in geographic modeling processes, helping to answer questions about the time variability of the landscape, structure, study the behavior of fire, predict areas of urban expansion, analyze propagation phenomena, model animal movement and behavior and determine periods and areas of high risk of flooding among other phenomena. GIS and Spatial Analysis is a critical book that provides different methodologies that combine the potential data, including Big Data analysis, with GIS applications. It gives readers a comprehensive overview of the current state of the art, methods of spatial analysis, focusing both on the new philosophical and theoretical foundations for spatial analysis and on a flexible framework for analysis in the real world for problems such as complexity and uncertainty. *An Introduction to Applied and Environmental Geophysics* John M. The book covers a range of applications including mineral, hydrocarbon and groundwater

exploration and emphasises the use of geophysics in civil engineering and in environmental investigations Following on from the international popularity of the first edition this new revised and much expanded edition contains additional case histories and descriptions of geophysical techniques not previously included in such textbooks The level of mathematics and physics is deliberately kept to a minimum but is described qualitatively within the text Relevant mathematical expressions are separated into boxes to supplement the text The book is profusely illustrated with many figures photographs and line drawings many never previously published Key source literature is provided in an extensive reference section a list of web addresses for key organisations is also given in an appendix as a valuable additional resource Covers new techniques such as Magnetic Resonance Sounding Controlled Source EM shear wave seismic refraction and airborne gravity and EM techniques Now includes radioactivity surveying and more discussions of down hole geophysical methods hydrographic and Sub Bottom Profiling surveying and Unexploded Ordnance detection Expanded to include more forensic archaeological glaciological agricultural and bio geophysical applications Includes more information on physio chemical properties of geological engineering and environmental materials Takes a fully global approach Companion website with additional resources available at www.wiley.com/go/reynolds introduction2e Accessible core textbook for undergraduates as well as an ideal reference for industry professionals The second edition is ideal for students wanting a broad introduction to the subject and is also designed for practising civil and geotechnical engineers geologists archaeologists and environmental scientists who need an overview of modern geophysical methods relevant to their discipline While the first edition was the first textbook to provide such a comprehensive coverage of environmental geophysics the second edition is even more far ranging in terms of techniques applications and case histories

Landslides in Sensitive Clays Vikas Thakur, Jean-Sébastien L'Heureux, Ariane Locat, 2017-05-23 This book gathers the most recent scientific research on the geological geotechnical and geophysical aspects of slope failure in sensitive clays Gathering contributions by international experts it focuses on understanding the complete and practical spectrum of challenges presented by landslides in such complex materials Based on sound and validated research results the book also presents several recommendations that could be implemented in the guidelines or code of practice These recommendations cover topics including the characterization and behavior of sensitive clays the pre failure failure and post failure stages of sensitive clays mapping and identification methods climate change hazard assessment and risk management Sensitive clays are known for their potential for causing large landslides which pose a serious risk to human lives infrastructure and surrounding ecosystems within their reach This has been demonstrated by the recent catastrophic landslides in e g S rum 2016 Skjeggstad 2015 Statland 2014 Byneset 2012 St Jude 2010 Lyngen 2010 and Kattmarka 2009 The 2015 collapse of the Skjeggstad Bridge in Norway which was due to a landslide in sensitive clay alone costs millions of dollars in repairs Recently efforts are being made to increase society's ability to cope with such landslide hazards Geoscientists are now expected to provide input to the agencies responsible for landslide risk preparedness

In other words geoscientists role is not only to act as technologists to establish new theories but also to go the extra mile to implement them in practice so as to find meaningful solutions to geotechnical problems **Journal of Mine Action** ,2006
