Hypothesis-- there will be a considerable favorable relationship between ball games on a memory test and scored on a test to anticipate your possibility of being a millionaire **Null Hypothesis--** there will be no considerable relationship between scores on a memory test and scores on a test determining the chances of ending up being a millionaire and any relationship is because of opportunity **Technique: Design--** the method of the experiment was a correlational research study; this was used in order to see whether there was a relationship between ball games on a memory test and ratings on a millionaire test. The experiment utilized co variables, which were the score on the memory test and rating on the millionaire test. **Controls--** in order guarantee the test was trustworthy the extraneous variables required to be controlled. Standardised guidelines were used as a control to provide all individuals the exact same instructions throughout the experiment, which meant that the experimenter did not affect the communication of the directions by altering them for each participant which reduces the quantity on experimenter predisposition. An additional control that was used was utilizing confidential information by designating each participant a number to tape-record that information on a table, instead of utilizing individual's names. **Participants--** the target population for the experiment were young individuals in the Gosport area of each gender. The sampling method was a chance sample of 10 trainees aged 17-18 both males and females (2 males and 8 females) at Bay Home Sixth Form from an A Level Psychology class and the scientist was a Psychology teacher at Bay House Sixth Form. **Apparatus and Products--** the products utilized for the experiment were a list of 34 words developed by the researcher that were forecasted onto the board, paper and pens attended to the individuals to tape the variety of words they remembered, a watch to time the one minute duration of remembering and making a note of the words, an online questionnaire to measure probability of becoming a millionaire at bbc.co.uk/science/humanbody/surveys/millionaire1/index.shtml **Treatment--** the individuals were first of all provided an explanation of the research study and what the study would involve for them. They were then given the equipment they required to complete the memory test whilst remaining anonymous and were given standardise instructions by the researcher of how to complete the test and the rules of the research. The participants were then shown the list of 34 words to memorise by projecting the list on the board and where given one minute to memorise as many words as possible. The words were then hidden and the researcher projected instructions to the participants to write down all the words they remembered and they were given one minute to do so. The number of words memorised were recorded by the researcher by assigning each participant with a number and they stated out loud their score. The participants were then asked to move to a computer room to complete an online survey to test their likelihood of becoming a millionaire, after they completed the questionnaire the participants had to record their score next to...
