Advanced Level of Technologies and It's ROI in Apparel Manufacturing Dr. Prabir Jana, 2020-06-23 Getting higher productivity doesn't mean working for more time with the available resources. It is all about how smartly we work. On a sewing floor, it refers to how efficient we are at doing a piece of work, i.e., opting the best method with the combination of most recent technology available. This not only increases the productivity but also saves money, improves quality by reducing defects. Following the above concept, a series of articles review the different levels of technology solutions available for an operation, the make and models of machinery and equipment available in the market. At the outset, it must be borne in mind that many of the operations are complex, time-consuming, and require a skilled operator. The process can be greatly simplified by using automatic machines available for the purpose, which promisingly enough, also give a fair ROI. This is calculated for each of the operations to gauge the overall advantage an automatic machine holds over a basic manually operated one.
