Online Student Teacher's Guide

The purpose of this guide is to help you understand the concepts of color vision and how they relate to the PhET online lab. This guide is intended for use by student teachers and is not meant to be a substitute for the lab itself. It is important to read this guide carefully and to use it as a reference while you are using the lab.

The lab is divided into three main sections: Color Vision, Color Mixing, and Color Perception. Each section contains a series of questions and answers that are designed to help you understand the concepts of color vision and how they relate to the PhET online lab.

The first section, Color Vision, discusses the basic principles of color vision and how the human eye perceives color. It covers topics such as the structure of the eye, the role of the retina, and the way in which the brain processes color information.

The second section, Color Mixing, discusses the different ways in which colors can be mixed together. It covers topics such as additive color mixing, subtractive color mixing, and the color wheel.

The third section, Color Perception, discusses the way in which our perception of color can be affected by various factors. It covers topics such as color blindness, color constancy, and the way in which our perception of color can be influenced by the context in which we are viewing a color.

After you have completed the lab, you should have a better understanding of the concepts of color vision and how they relate to the PhET online lab. This guide is intended to be a helpful resource for you as you teach these concepts to your students.

This lab is intended for use by student teachers and is not meant to be a substitute for the lab itself. It is important to read this lab carefully and to use it as a reference while you are using the lab.

Color Mixing

Color mixing is the process of combining two or more colors to create a new color. There are two main types of color mixing: additive color mixing and subtractive color mixing. Additive color mixing involves combining light of different colors, while subtractive color mixing involves combining pigments of different colors.

Color Perception

Color perception is the way in which our brain interprets the information that it receives from the eyes. It is a complex process that involves the brain's ability to process and interpret the information that it receives from the eyes. There are many factors that can affect our perception of color, including the way in which we are viewing a color and the context in which we are viewing a color.
