Estimating and Installing Modern Systems for Heating and Ventilating Buildings With Warm Air If you want to ventilate your
room to warm it and open the bottom aperture you will succeed in both because the fresh air will be the warmest and will not
stop until it comes in contact with the ceiling where spreading out in a level strata over the whole ceiling it will keep its
relative position to the whole body until it reaches the bottom and passes out through the aperture If we want to ventilate our
room to cool it we must let the air out at or near the top About the Publisher Forgotten Books publishes hundreds of
