Google ["PHET Optics"](#), click on the first link, hit play, and then choose 'Mirror'.

Make sure the boxes for 'Focal Points', 'Virtual Image', and 'Labels' toward the bottom right are all checked. Set the radius of curvature to **150 cm**. Choose either 'Concave' or 'Convex' depending on the chart. Change the measure of the diameter to the given values. Using the horizontal ruler from the top right of the page, measure the distance from the focal point ('F') to the front of the mirror - we call this the '**Focal Length**'. Don't worry about the location of the object for this part.

Type of Mirror	Diameter (cm)	Focal Length (cm)
Concave	60	75 cm
Concave	75	75 cm
Concave	90	75 cm
Concave	105	75 cm
Concave	120	75 cm
Convex	60	75 cm
Convex	75	75 cm
Convex	90	75 cm
Convex	105	75 cm
Convex	120	75 cm

Table 1

1. What happens to the distance of the focal length from the mirror as we increase the diameter (size) of the **concave** mirror?
 - *The distance of the focal length from the mirror did not change even if we increase the diameter of the concave mirror.*
2. What happens to the distance of the focal length from the mirror as we increase the diameter (size) of the **convex** mirror?
 - *Also, the distance of the focal length from the mirror did not change even if we increase the diameter of the convex mirror.*

Learning With Escape Rooms in Higher Education Online Environments Santamaría Urbieta, Alexandra, Alcalde Peñalver, Elena, 2023-02-10 Teachers professors and educational professionals have the opportunity to create new challenging significant and interactive learning experiences for today's students. Escape rooms are growing in popularity as they provide numerous benefits and opportunities for learning; however, the use of escape rooms in higher education is not always taken seriously. Learning With Escape Rooms in Higher Education Online Environments proves that it is possible to take escape rooms to higher education with great results for both teachers and students by presenting different escape room proposals that are explained in detail with the instructions and materials used so that any teacher could replicate it in their subject. Covering key topics such as online learning, student learning, and computer science, this reference work is ideal for principals, industry professionals, researchers, scholars, practitioners, academicians, instructors, and students. *Active Learning in College Science* Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence-based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book, we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4-year liberal arts institutions, comprehensive regional campuses, and flagship research universities. In keeping with Wieman's challenge, our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on Constructivist Learning Theory, Section I the practices we explore are Eliciting Ideas and Encouraging Reflection; Section II Using Clickers to Engage Students; Section III Supporting Peer Interaction through Small Group Activities; Section IV Restructuring Curriculum and Instruction; Section V Rethinking the Physical Environment; Section VI Enhancing Understanding with Technology; Section VII and Assessing Understanding; Section VIII. The book's final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses. The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events. Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view, learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students, that knowledge base is riddled with a host of naïve notions, misconceptions, and alternative

conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
