Hodges, 2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty

spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching Applications of Nanotechnology for Green Synthesis Inamuddin, Abdullah M. Asiri,2020-07-02 Traditional methods in synthetic chemistry produce chemical waste and byproducts yield smaller desired products and generate toxic chemical substances but the past two centuries have seen consistent greener improvements in organic synthesis and transformations These improvements have contributed to substance handling efficiency by using green engineered forerunners like sustainable techniques green processes eco friendly catalysis and have minimized energy consumption reduced potential waste improved desired product yields and avoided toxic organic precursors or solvents in organic synthesis Green synthesis has the potential to have a major ecological and monetary impact on modern pharmaceutical R D and organic chemistry fields This book presents a broad scope of green techniques for medicinal analytical environmental and organic chemistry applications It presents an accessible overview of new innovations in the field dissecting the highlights and green chemistry attributes of approaches to green synthesis and provides cases to exhibit applications to pharmaceutical and organic chemistry Although daily chemical processes are a major part of the sustainable development of pharmaceuticals and industrial products the resulting environmental pollution of these processes is of
