The Pluto System After New Horizons S. Alan Stern, 2021-08-10 Once perceived as distant cold dark and seemingly unknowable Pluto had long been marked as the farthest and most unreachable frontier for solar system exploration After Voyager accomplished its final planetary reconnaissance at Neptune in 1989 Pluto and its cohort in the Kuiper Belt beckoned as the missing puzzle piece for completing the first reconnaissance of our solar system In the decades following Voyager a mission to the Pluto system was not only imagined but also achieved culminating with the historic 2015 flyby by the New Horizons spacecraft Pluto and its satellite system the Pluto system including its largest moon Charon have been revealed to be worlds of enormous complexity that fantastically exceed preconceptions The Pluto System After New Horizons seeks to become the benchmark for synthesizing our understanding of the Pluto system The volume's lead editor is S Alan Stern who also serves as NASA's New Horizons Principal Investigator co editors Richard P Binzel William M Grundy Jeffrey M Moore and Leslie A Young are all co investigators on New Horizons Leading researchers from around the globe have spent the last five years assimilating Pluto system flyby data returned from New Horizons The chapters in this volume form an enduring foundation for ongoing study and understanding of the Pluto system The volume also advances insights into the nature of dwarf planets and Kuiper Belt objects providing a cornerstone for planning new missions that may return to the Pluto system and explore others of the myriad important worlds beyond Neptune

Emerging Studies and Applications of Grey Systems Yingjie Yang, Sifeng Liu, 2023-02-04 This book aims to provide a practical guide by a set of real world applications of grey systems to social networks energy management transportation natural disaster management etc As an emerging subject on data analysis and uncertainty modelling the theory of grey systems and its applications have seen significant progress in recent years However researchers are still challenged with difficulties in differentiating grey systems from other similar models and a concise and practical guide for their real world applications This is especially true for researchers in Europe and North American This book may provide the answer for that This book is a result of work within the Leverhulme Trust International Research Network on Grey Systems and its Applications Readers may regard the book as valuable reference in the related fields

Avoiding Attack Graeme D. Ruxton, William L. Allen, Thomas N. Sherratt, Michael P. Speed, 2019-01-31 Avoiding Attack discusses the diversity of mechanisms by which prey avoid predator attacks and explores how such defensive mechanisms have evolved through natural selection It considers how potential prey avoid detection how they make themselves unprofitable to attack how they communicate this status and how other species have exploited these signals Using carefully selected examples of camouflage

mimicry and warning signals drawn from a wide range of species and ecosystems the authors summarise the latest research into these fascinating adaptations developing mathematical models where appropriate and making recommendations for future study This second edition has been extensively rewritten particularly in the application of modern genetic research techniques which have transformed our recent understanding of adaptations in evolutionary genomics and phylogenetics The book also employs a more integrated and systematic approach ensuring that each chapter has a broader focus on the evolutionary and ecological consequences of anti predator adaptation The field has grown and developed considerably over the last decade with an explosion of new research literature making this new edition timely **New Insights into**

High-Energy Processes on the Sun and Their Geospace Consequences Xiangliang Kong,Jing Liu,Gang Li,2025-02-21

The Sun releases an enormous amount of energy during explosive solar activities such as solar flares and coronal mass ejections The solar corona can be heated up to tens of millions of degrees and a large number of charged particles can be accelerated to nearly the speed of light Heated plasmas and high energy particles increase solar radiations across the whole electromagnetic spectrum from radio to gamma ray wavelengths which can have a profound effect on the Earth s upper atmosphere immediately after about eight minutes These create additional ionization and heating in the Earth s upper atmosphere leading to radio blackout GNSS signal interferences and tracking loss increased drag on spacecraft etc Recent studies have demonstrated that the effects can extend to the Earth s magnetosphere via electrodynamic coupling When the high energy particles propagate through the interplanetary medium and arrive at the vicinity of the Earth known as solar energetic particle SEP events they can pose hazardous radiation threats to astronauts and spacecraft electronics in space

Individual Differences: From Neurobiological Bases to New Insight on Approach and Avoidance Behavior

Daniela Laricchiuta,2016-01-22 The superordinate division of emotions is distributed along a bipolar dimension of affective valence from approaching rewarding situations to avoiding punitive situations Avoiding and approaching behaviors determine the disposition to the primary emotions of fear and attachment and the behavioral responses to the environmental stimuli of danger novelty and reward Approach or avoidance behaviors are associated with the brain pathways controlling cognitive and attentional function reward sensitivity and emotional expression involving prefrontal cortex amygdala striatum and cerebellum Individual differences in approach and avoidance behavior might be modulated by normal variance in the level of functioning of different neurotransmitter systems such as dopaminergic serotonergic noradrenergic and endocannabinoid systems as well as many peptides such as corticotropin releasing hormone These substances act at various central target areas to increase intensity of appetitive or defensive motivation Physiologically personality temperaments of approach and avoidance are viewed as instigators of propensity They produce immediate affective cognitive and behavioral inclinations in response to stimuli and orient individuals across domains and situations in a consistent fashion Although the action undoubtedly emerges directly from these temperamental proclivities ultimate behavioral outcomes are often a function

of the integration among goal pursuit self regulation and temperament trait Defective coping strategies to aversive or rewarding stimuli characterize the patho physiology of anxiety and stress related disorders or compulsive and addiction behaviors respectively Individuals with neuropsychiatric symptoms such as depression suicidal behavior bipolar mania schizophrenia substance use disorders pathological gambling and anxiety disorders have scores which fall at the extreme tails of the normal distribution for a specific temperamental trait The present Research Topic on the individual differences in emotional and motivational processing emphasizes the link between neuronal pattern and behavioral expression The Topic includes experimental and clinical researches addressing the individual differences related to approach and avoidance and their behavioral characterization structural and neurochemical profiles synaptic connections and receptor expressions Studies are organized in a framework that puts in evidence the phenotypic expression and neurobiological patterns characterizing the individual differences and their biological variance **The Exoplanet Handbook** Michael

Innovations in Fishing Technology Aimed at Achieving Sustainable Fishing Alessandro Lucchetti,Valentina Melli,Jure Brčić,2023-11-20 Over the last fifty years human exploitation of marine resources has become more efficient as the understanding of the habits and behaviour of the various species available in the sea gradually increased Thus technologies have developed naturally over time and fishing gears and practices have become more sophisticated These technical advances in fishing gear have generally led to more efficient economic fishing operations and better access to resources However fishing implies the harvesting of marine organisms directly from their natural environment therefore general awareness of environmental problems due to the exploitation of fishery resources has also increased In particular the poor selectivity of some gears is responsible for the capture of juveniles immature and undersized specimens of many species with negative consequences on the state of stocks In addition bycatch in marine fisheries is a major source of human caused mortality of marine megafauna often leading to the capture of vulnerable species Finally many bottom towed gears are responsible for high impacts on bottom communities and habitats with cascading consequences on the entire marine ecosystem All these impacts can lead to changes in the structure function and integrity of ecosystems including effects on the food webs and multispecies predator prey relationships **Advances in Guidance, Navigation and Control** Liang
