Smartphones represent the future of modern communications In 2013 more than 1 billion smartphones were sold a further milestone in the advance of these devices<sup>1</sup> A study published by Facebook emphasises the importance of smartphones in our lives about 80% of users make use of their smartphone within 15 minutes of waking up each day At the same time the traditional function of a telephone is becoming less and less important The high quality of integrated cameras means that the smartphone is increasingly used for photography As well as with photos users trust their devices with their most personal communications such as Facebook WhatsApp and email This brings some risks with it as such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data There is also the danger brought by phishing attacks These days the use of security software on a PC or laptop is seen as essential However many smartphone users do not yet have the same sense of responsibility even though their devices store personal data private photos Internet banking information or even company data As modern smartphones are often expensive to buy they are also an attractive target for thieves Top quality smartphones cost several hundred Euros As it is not possible to physically prevent them from being stolen they must be made less attractive to thieves Consequently many of today s security products contain not only malware protection but also highly developed theft protection functions which make the device less attractive to thieves e g by locking the device and help the owner to find it again

Artificial Intelligence for Edge Computing Mudhakar Srivatsa, Tarek Abdelzaher, Ting He, 2023-12-21 It is undeniable that the recent revival of artificial intelligence AI has significantly changed the landscape of science in many application domains ranging from health to defense and from conversational interfaces to autonomous cars With terms such as Google Home Alexa and ChatGPT becoming household names the pervasive societal impact of AI is clear Advances in AI promise a revolution in our interaction with the physical world a domain where computational intelligence has always been envisioned as a transformative force toward a better tomorrow Depending on the application family this domain is often referred to as Ubiquitous Computing Cyber Physical Computing or the Internet of Things The underlying vision is driven by the proliferation of cheap embedded computing hardware that can be integrated easily into myriads of everyday devices from consumer electronics such as personal wearables and smart household appliances to city infrastructure and industrial process control systems One common trait across these applications is that the data that the application operates on come directly typically via sensors from the physical world Thus from the perspective of communication network infrastructure the data originate at the network edge From a performance standpoint there is an argument to be made that such data should be processed at the point of collection Hence a need arises for Edge AI a genre of AI where the inference and sometimes even the training are performed at the point of need meaning at the edge where the data originate The book is broken down into three parts core problems distributed problems and other cross cutting issues It explores the challenges arising in Edge AI contexts Some of these challenges such as neural network model reduction to fit resource constrained hardware are unique to the edge environment

They need a novel category of solutions that do not parallel more typical concerns in mainstream AI Others are adaptations of mainstream AI challenges to the edge space An example is overcoming the cost of data labeling The labeling problem is pervasive but its solution in the IoT application context is different from other contexts This book is not a survey of the state of the art With thousands of publications appearing in AI every year such a survey is doomed to be incomplete on arrival It is also not a comprehensive coverage of all the problems in the space of Edge AI Different applications pose different challenges and a more comprehensive coverage should be more application specific Instead this book covers some of the more endemic challenges across the range of IoT CPS applications To offer coverage in some depth we opt to cover mainly one or a few representative solutions for each of these endemic challenges in sufficient detail rather than broadly touching on all relevant prior work The underlying philosophy is one of illustrating by example The solutions are curated to offer insight into a way of thinking that characterizes Edge AI research and distinguishes its solutions from their more mainstream counterparts

*EcoDesign and Sustainability I* Yusuke Kishita, Mitsutaka Matsumoto, Masato Inoue, Shinichi Fukushima, 2020-11-02 This book highlights cutting edge ecodesign research covering product and service design smart manufacturing and social perspectives in ecodesign Featuring selected papers presented at EcoDesign 2019 11th International Symposium on Environmentally Conscious Design and Inverse Manufacturing it also includes diverse interdisciplinary approaches to foster ecodesign research and activities In the context of Sustainable Development Goals SDGs it addresses the need for the manufacturing industry to design innovations for sustainable value creation taking into account technological developments legislation and consumer lifestyles Further the book discusses the concept of circular economy which originated in Europe and aims to increase resource efficiency by shifting away from the linear economy Focusing on product life cycle design and management smart manufacturing circular economy and business strategies and providing useful approaches and solutions to these emerging concepts this book is intended for both researchers and practitioners working in the broad field of ecodesign and sustainability

**Smart Organizations and Smart Artifacts** Leonardo Caporarello,Beniamino Di Martino,Marcello Martinez,2014-05-15 This book offers a multidisciplinary strategy for finding new and more effective human computer interaction approaches in particular from a socio technical perspective that facilitate the exploration and exploitation of benefits that information technologies IT offer organizations Though the relationship between IT and organizations is certainly very strong it is also one of the greatest obstacles to securing benefits from their interaction The participation of organizational users in the planning and design stages of IT interfaces is the main area of human computer interaction where a wealth of contributions are positively enriching both the academic and management discussions Thus a new approach for managing this relationship is needed one in which the different stakeholders are suitably taken into account Moreover the outstanding success of the 2 0 phenomenon offers an example of a relevant platform where human computer interaction has been widely developed and exploited Consequently this will influence and already is influencing the way IT and users interact with each other The book is based on a selection of the best papers original double blind peer reviewed contributions from the annual conference of the Italian chapter of the AIS held in Milan Italy in December 2013

full papers presented were carefully reviewed and selected from 101 initial submissions The papers are organized in topical sections on machine learning in Arabic text recognition and assistive technology recommendation systems for cloud services machine learning in watermarking authentication and virtual machines features extraction and classification rough fuzzy sets and applications fuzzy multi criteria decision making Web based application and case based reasoning construction social networks and big data sets      **Smartphone-Based 3D Indoor Localization and Navigation** Frank Ebner,2021-01-10

During the last century navigation systems have become ubiquitous and guide drivers cyclists and pedestrians towards their desired destinations While operating worldwide they rely on line of sight conditions towards satellites and are thus limited to outdoor areas However finding a gate within an airport a ward within a hospital or a university s auditorium also represent navigation problems To provide navigation within such indoor environments new approaches are required This thesis examines pedestrian 3D indoor localization and navigation using commodity smartphones A desirable target platform always at hand and equipped with a multitude of sensors The IMU accelerometer gyroscope magnetometer and barometer allow for pedestrian dead reckoning that is estimating relative location changes Absolute whereabouts can be determined via Wi Fi an infrastructure present within most public buildings or by using Bluetooth Low Energy Beacons as inexpensive supplement The building s 3D floorplan not only enables navigation but also increases accuracy by preventing impossible movements and serves as a visual reference for the pedestrian All aforementioned information is fused by recursive density estimation based on a particle filter The conducted experiments cover both theoretical backgrounds and real world use cases All discussed approaches utilize the infrastructure found within most public buildings are easy to set up and maintain Overall this thesis results in an indoor localization and navigation system that can be easily deployed without requiring any special hardware components      **E-Business and Telecommunications** Mohammad S. Roberts,2014-01-10 If you read technology news you ll notice it s not just a story of amazing new product introductions or even that plus copycat product introductions All the usual aspects of business are there fierce competition new contenders old survivors great ideas but business failures mediocre ideas that somehow seem to succeed and prosper As a reporter commentator and blogger on mobile technology I ve collected what happened in the industry in 2013 and make predictions on what will and won t happen in 2014 You can read what did happen in the mobile technology in 2013 Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement This way you can dive into any detail level you desire read my news feed for the overview or follow the related web link to the longer article History is moving so fast now that it is all recorded electronically but I m surprised no one else has collected it and presented it for consideration Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed It s often overlooked that the technology industry is an industry By that I mean its main concerns are profit and growth As consumers we love the new products and unique abilities we are gaining from technology but it is a business akin to any other trying to seduce us to pry money out of our wallets So I cover the horse race aspect of the business who s up who s down Is that changing Is that likely to change The longer implications of what the technology industry is doing are vast and social We are moving to an always on always connected society where we can communicate with someone instantly and find an answer to any question quickly The entire database of human knowledge is now available in the palm of your hand whenever you desire it Everything is there the good the bad right and wrong hate and love music and noise We are obsessed

with technology not in and of itself but as a means to an end Technology is the means to satisfy our curiosity or even our desire for self expression We are taking photos machine gun style with our smartphones and choose the few to share As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible Bill Gates was once asked why the computer industry had generated so much improvement in its products over a relatively few years He gave some boring answer about Moore s Law but the real answer is that computers are in their teenage years They are growing and growing They will not always do so So too the technology industry is in a state of rapid change I see the shift to smaller devices as a new paradigm smashing some businesses and growing others into giants Their stories are here in the news In short here are predictions for what won t and will happen in 2014 for the mobile technology industry breakdowns of marketshare figures on the horse race aspect of the business chapters on Apple Samsung Google Microsoft Nokia Blackberry Amazon Yahoo news about social media giants Facebook Twitter Google LinkedIn Foursquare SnapChat and the carriers themselves Verizon AT T Sprint and T Mobile You can also review my 2013 mobile predictions and see my track record on predictions Finally there are some essays on how all this mobile tech is figuring into our lives I ve divided the news into the subjects it covers but also put in the appendix all the news as it came out in chronological ordering You can read the firehose of events in the appendix or just read about one topic at a time in the earlier chapters Table of Contents Preface Introduction Chapter 1 2014 Predictions Chapter 2 Mobile Marketshare Chapter 3 Apple Chapter 4 Samsung Chapter 5 Google Chapter 6 Microsoft Chapter 7 Nokia Chapter 8 Blackberry Chapter 9 Amazon Chapter 10 Social Media Chapter 11 Yahoo Chapter 12 Carriers Chapter 13 2013 Predictions Chapter 14 Essays Appendix
