Complete story	S: MS is a 77 y/o woman who presents with a rash. The rash began one week ago and first appeared on her back and extended to her abdomen on the left side. She first noticed the rash after working in her garden. For the first 3 days she had no associated symptoms, however on the 4 th day, she began to experience severe pain "like being stung by a bee". The pain is worse in the evenings and she is having difficulty sleeping. She has been taking Tylenol every 4-6 hours and using Vitamin E lotion with minimal relief. She is worried she may have poison ivy.
One paragraph summary of medical history & medications	She has a history of hypertension. Her medications include: Nifedipine XL, Hmg daily and Metoprolol 50mg BID.
One sentence summary of the problem	O: MS is an elderly woman who appears energetic and is in no distress. VS: BP 130/80, P 68, RR 12, T 37°. Skin exam reveals an erythematous rash of grouped vesicles with clear fluid, approximately half of which are crusted over. The rash extends from the midline of the back anterior to the left side of the T12/L1 dermatome region.
Differential diagnosis and rational reasoning for an acute problem	A: A new onset painful rash in a dermatomal distribution. This is most likely secondary to herpes zoster because of the location, distribution and associated pain. A less likely possibility is contact dermatitis, given her recent gardening. She may also have a cellulitis, but the lack of temperature doesn't support this. P: #1 MS will continue to use Tylenol for pain relief. #2 MS was informed that she may continue to experience pain after the rash resolves. #3 MS should return to clinic if the pain becomes more severe or if she develops worse, redness or a fever.
