investigated and it is explored how AR can assist in the execution of complex parallel and time critical tasks Following a Human Centered Design HCD approach the research is grounded in observations and expert interviews leading to three central research questions How can time critical parallel tasks be visualized within the field of view FoV How can they be guided outside the FoV How can users gain an overview of distributed tasks Findings show that AR reduces task complexity improves performance and is preferred over traditional instructions However supporting more than two concurrent tasks increases cognitive load For spatially distributed tasks location based AR cues alone are not sufficient additional peripheral visual signals and spatially registered overviews are essential for effective support *Daily Graphic* Ransford
