

Optics – The Study of Light

Refraction

Light *refracts* when passing between two substances at an *angle*.

Light slows down in glass. Here the left side slows down first causing the light to bend to the left.

Light speeds up in air. Here the left side speeds up first causing the light to bend to the right.

The right side hits first and slows down causing the light to bend to the right.

If the light does not enter at an angle, it does not bend.

Reflection

Light reflects at shiny boundaries we call mirrors.

Normal – an imaginary line 90° (perpendicular) to a surface.

Angle of Incidence – the angle between the incoming ray and the normal.

Angle of Reflection – the angle between the outgoing ray and the normal.

angle of incidence = angle of reflection

Focus

Every lens or mirror has a place where all of the parallel rays will meet. This is known as the *focal point* or *focus*.

Straight Lines

Mirrors and lenses can make things look bigger or smaller because our eyes always think that light comes from straight lines, even if they have been refracted or reflected.

Object vs. Image

The **object** is what you are looking at: the actual thing.

The **image** is what you think you see: the object enlarged, reduced, or moved.

Lenses

Lenses work by refraction, by the light bending when moving between two substances.

A convex lens magnifies.

A convex lens is **convergent** – the light rays come together.

A concave lens reduces.

A concave lens is **divergent** – the light rays spread apart.

Lenses and mirrors work opposite of each other. If a convex lens reduces, then a concave mirror magnifies.

Concave or Convex

Optical Systems

Microscopes and telescopes are **optical systems** that use combinations of lenses and/or mirrors to magnify light. Combining optical devices allows us to see very distant or very small objects.

Mirrors

Mirrors work by reflections, by the bouncing of light off of a shiny surface. **Images in mirrors always look twice as far away as the object.**

Ex. An image looks 20 m away in a mirror. How far away is the object?
 Answer: Half the distance: 10 meters.

A convex mirror reduces.

A convex mirror is **divergent**.

A concave mirror magnifies.

A concave mirror is **convergent**.

Optometry - Snapshot Concept Cards LD Mathews ,2024-09-04 Welcome to your

ultimate pack of Optometry Snapshot Concept Cards Think of this collection as your Uni in Your Back Pocket a compact fun and incredibly handy guide to mastering the key concepts that will shape your journey in the fascinating world of optometry Whether you re just starting out or brushing up on your knowledge these cards are designed to make learning engaging and accessible Each card breaks down complex topics into bite sized easy to understand pieces We ve used analogies everyday language and clear explanations to help you grasp everything from the anatomy of the eye to the latest imaging techniques

Science Patricia Fara,2009 Science A Four Thousand Year History rewrites science s past Instead of focussing on difficult experiments and abstract theories Patricia Fara shows how science has always belonged to the practical world of war politics and business Rather than glorifying scientists as idealized heroes she tells true stories about real people men and some women who needed to earn their living who made mistakes and who trampled down their rivals in their quest for success Fara sweeps through the centuries from ancient Babylon right up to the latest hi tech experiments in genetics and particle physics illuminating the financial interests imperial ambitions and publishing enterprises that have made science the powerful global phenomenon that it is today She also ranges internationally illustrating the importance of scientific projects based around the world from China to the Islamic empire as well as the more familiar tale of science in Europe from Copernicus to Charles Darwin and beyond Above all this four thousand year history challenges scientific supremacy arguing controversially that science is successful not because it is always right but because people have said that it is right **How**

the authors have streamlined their bestselling reference to zero in on just the clinical answers ophthalmologists need in day to day practice This new edition presents unparalleled guidance on nearly every ophthalmic condition and procedure **A Critical Edition of Ibn al-Haytham's On the Shape of the Eclipse** Dominique Raynaud,2016-11-16 This book provides the first critical edition of Ibn al Haytham s On the Shape of the Eclipse with English translation and commentary which records the first scientific analysis of the camera obscura On the Shape of the Eclipse includes pioneering research on the conditions of formation of the image in a time deemed to be committed to aniconism It also provides an early attempt to

merge the two branches of Ancient optics the theory of light and theory of vision What perhaps most strongly characterizes this treatise is the close interaction of a geometric analysis of light and experimental reasoning Ibn al Haytham conducted his experiments in a systematic way by varying all that could be changed the shape and size of the aperture the focal length of the camera obscura the distance and shape of the celestial bodies This way he achieved a thorough understanding This work represents a decisive step in both the history of optics and the application of the experimental method that was just as efficient in medieval Islam as today

The Science of Nature in the Seventeenth Century Peter R. Anstey,John A. Schuster,2006-06-28 One of

the hallmarks of the modern world has been the stunning rise of the natural sciences. The exponential expansion of scientific knowledge and the accompanying technology that so impact on our daily lives are truly remarkable. But what is often taken for granted is the enviable epistemic credit rating of scientific knowledge: science is authoritative, science inspires confidence, science is right. Yet it has not always been so. In the seventeenth century the situation was markedly different: competing sources of authority, shifting disciplinary boundaries, emerging modes of experimental practice and methodological reflection were some of the constituents in a quite different milieu in which knowledge of nature was by no means pre-eminent. It was the desire to probe the underlying causes of the shift from the early modern nature knowledge to modern science that was one of the stimuli for the Origins of Modernity Early Modern Thought 1543-1789 conference held in Sydney in July 2002. How and why did modern science emerge from its early modern roots to the dominant position which it enjoys in today's post-modern world? Under the auspices of the International Society for Intellectual History, The University of New South Wales and The University of Sydney, a group of historians and philosophers of science gathered to discuss this issue. However, it soon became clear that a prior question needed to be settled: first the question as to the precise nature of the quest for knowledge of the natural realm in the seventeenth century.

Exemplary Science In Informal Education Settings: Standards-Based Success Stories Robert E. Yager, 2007-10-04. Just as science education doesn't stop at the schoolhouse door, neither should effective application of the National Science Education Standards. Exemplary Science in Informal Education Settings shows real world examples of how science education reform has taken hold in museums, science centers, zoos and aquariums, as well as on television, radio and the internet. This essay collection, the fifth volume in the Exemplary Science Monograph Series, features 17 informal education programs that were judged to be most successful at increasing participants' learning. The programs demonstrate how the Standards can be used to inform and improve science education in a wide range of settings and with learners ranging from pre-schoolers to older adults.

The Science and Technology of Counterterrorism Carl Young, 2014-02-26. Scientists with little or no background in security and security professionals with little or no background in science and technology often have difficulty communicating in order to implement the best counterterrorism strategies. *The Science and Technology of Counterterrorism* offers the necessary theoretical foundation to address real world terrorism scenarios effectively, bridging the gap. It provides a powerful security assessment methodology coupled with counterterrorism strategies that are applicable to all terrorism attack vectors. These include biological, chemical, radiological, electromagnetic, explosive and electronic or cyber attacks. In addition to rigorous estimates of threat vulnerabilities and the effectiveness of risk mitigation, it provides meaningful

terrorism risk metrics The Science and Technology of Counterterrorism teaches the reader how to think about terrorism risk and evaluates terrorism scenarios and counterterrorism technologies with sophistication punctuated by humor Both students and security professionals will significantly benefit from the risk assessment methodologies and guidance on appropriate counterterrorism measures contained within this book Offers a simple but effective analytic framework to assess counterterrorism risk and realistic measures to address threats Provides the essential scientific principles and tools required for this analysis Explores the increasingly important relationship between physical and electronic risk in meaningful technical detail Evaluates technical security systems to illustrate specific risks using concrete examples
