

Periodic Trends Worksheet

Name: _____ Grade: _____ ID: _____

Directions: Use your notes to answer the following questions.

- 1 Rank the following elements by increasing atomic radius: carbon, aluminum, oxygen, potassium.

Ans: O, C, Al, K

- 2 Rank the following elements by increasing electronegativity: sulfur, oxygen, neon, aluminum.

Ans: Ne, Al, S, O

- 3 Why does fluorine have a higher ionization energy than iodine?

Ans: Fluorine has a smaller atomic radius, so the proton can exert a greater pull on electron (Valence shell is close)

- 4 Why do elements in the same family generally have similar properties?

Ans: They have the same valence shell electron arrangement.

- 5 Indicate whether the following properties increase or decrease from left to right across the periodic table.

- a. atomic radius (excluding noble gases) **Decrease**
- b. first ionization energy **Increase**
- c. electronegativity **Increase**

- 6 What trend in atomic radius occurs across the periodic table? What causes this trend?

Ans: Atomic radius increases down a group because energy levels (shells) are added.

- 7 What trend in ionization energy occurs across a period on the periodic table? What causes this trend?

Ans: Ionization energy increases across a period because as elements become less metallic, it requires more energy to remove an electron.

- 8 Circle the atom in each pair that has the largest radius.

a. Al or B

d. O or F

b. Na or Al

e. Br or Cl

c. S or O

f. Mg or Ca

Our brains are inherently visual processing images faster and retaining them longer than text or auditory information. This innate preference makes visuals a cornerstone of effective learning and memory retention. Research shows that 90% of information transmitted to the brain is visual and images are processed 60 000 times faster than text highlighting their power in enhancing understanding and recall. Visual learning leverages this by combining visuals with text a concept supported by Dual Coding Theory. This approach stores information in both verbal and visual formats creating stronger mental connections. Images also evoke emotions and context anchoring abstract ideas into tangible frameworks that are easier to remember. In education visuals simplify complex topics through charts infographics and diagrams making information more digestible. Digital tools like augmented and virtual reality create immersive experiences that deepen understanding. Visual aids also play a critical role in corporate training and everyday memory techniques such as mind maps and color coded notes. However effective use of visuals requires balance. Overloading learners with excessive imagery can lead to cognitive fatigue. The key is integrating meaningful visuals that complement content enhancing engagement without distraction. By understanding the brain's affinity for images we can harness visual learning to unlock better retention deeper comprehension and a more impactful learning experience.
