Nurses are in the forefront for becoming great, influential leaders in the transformation of future healthcare through the use of education and health promotion. As the population continues to grow, nurses are sought out as educators and not just caregivers. Nurses are also capable of providing the public with the education it needs to prevent illness and disease, and promote quality healthcare. By expanding emphasis not only on the individual, but family and community groups as well, a wider outreach for public health, promotion, and education can be addressed. There are three types of prevention described as primary, secondary and tertiary, which aim to prevent the onset of a targeted condition (GCU, 2011). Implementing health education to avoid health conditions as the primary prevention, aiding and treating symptomatic individual's as the secondary prevention, and restore function and negative effects of an already acquired disease as the tertiary prevention, the hopes to overcome and implement a cost- efficient, healthy lifestyle can be achieved (Fitzgerald, 2011).

Through health promotion, prevention, and intervention, the future of healthcare can be based on educating the public to promote longevity and quality of life by using primary, secondary and tertiary preventions. The World Health Organization (WHO) defines health promotion as "the process which enables people to improve control over the determinants of health, and as a result to improve their own health" (Jadelhack, 2012). By providing health promotion to others, the nurse is enabling the individual to take control, responsibility and action for their own healthcare. "Individually and through national associations, nurses, along with other healthcare providers, can be effective in paving the road for good health through health promotion" (Jadelhack, 2012). Through seminars, lectures, handouts, and teaching, nurses are educating the public to become their own advocates of care.

Through the use of health promotion and education, the nurse is teaching the individual about disease, prevention, and how to promote for the care of themselves and their families. The American Nurses Association (ANA) states, "Nursing must expand its efforts to design and implement interventions which support promotion of health and prevention of disease/illness and disability" (ANA, 2007). There are multiple dimensions that must be taken into consideration when referring to the health of an individual including, physical, mental, spiritual, and social. With the evolution of healthcare, nurses must begin to increase their efforts in health promotion by viewing the individuals they serve as holistic, and also considering the families and communities as well.

With the evolution of nursing into public, community, and home healthcare settings, nurses must now have a wide knowledge base, adequate critical thinking skills, and an active involvement in disease prevention, to promote quality health (Edelman & Mandle, 2010). The nurse must utilize the nursing process by assessing the individual's learning style and educational background in order to adequately present material to the individual. The nurse must plan, implement and evaluate the individual's change in lifestyle habits including physical activity, healthy eating, and motivation, need and desire in order...

Does health promotion have a lasting and positive effect on people With mounting pressure to reduce costs to the NHS and increasing scepticism of the so called nanny state health promotion initiatives are increasingly being criticised as costly and

ineffective with many arguing that health inequalities can only be reduced through radical political and economic change. This book examines the methods used to evaluate the value of health promotion projects and determines whether attempts to change people's lifestyles have proved successful. Taking into account the practical and ethical issues involved in deciding the appropriate approach to take in efforts to reduce health inequalities, the book assesses what might be the best path forward for health promotion.

Resources in Education, 1997-04 [Handbook of Research Design and Social Measurement](#) Delbert C. Miller, Neil J. Salkind, 2002-01-16 If a student researcher had only one handbook on their bookshelf, Miller and Salkind's Handbook would certainly have to be it. With the updated material, the addition of the section on ethical issues, which is so well done that I'm recommending it to the departmental representative to the university IRB, and a new Part 4 on Qualitative Methods, the new Handbook is an indispensable resource for researchers. Dan Cover, Department of Sociology, Furman University. I have observed that most instructors want to teach methodology their way to imbue the course with their own approach. Miller Salkind allows one to do this easily. The book is both conceptually strong, e.g., very good coverage of epistemology, research design, and statistics, and at the same time provides a wealth of practical knowledge, scales, indices, professional organizations, computer applications, etc. In addition, it covers the waterfront of methodology. Michael L. Vasu, Director of Information Technology, North Carolina State University. A unique and excellent reference tool for all social science researchers and a good textbook for graduate students and senior year undergraduate classes. These students are about to enter the real life of research and need a handy and comprehensive tool as a starting point that offers shortcuts for getting into real research projects. For a small project, the book offers enough information to get the project started. For big projects, the book is ideal for information on where to look for things and examples. Jianhong Liu, Department of Sociology, Rhode Island College. The book, considered a necessity by many social science researchers and their students, has been revised and updated while retaining the features that made it so useful. The emphasis in this new edition is on the tools graduate students and more advanced researchers need to conduct high-quality research. Features: Benefits: Provides step-by-step instruction for students' research training by beginning with how to find a creative idea, a middle-range theory, and initial
