Cumulated Index Medicus, 1997 **Phase Evolution of Boron Nitride and Carbide during Chemical Vapor Deposition** Sachin Sharma, 2024-05-02 Thin films of Boron Nitride BN and Boron Carbide BC possess properties that make them attractive for various applications Epitaxially grown BN exhibits potential for optoelectronic devices as piezoelectric materials and graphene technology Epitaxial BC is a semiconductor that could allow bandgap tuning and has potential applications in thermoelectric and optoelectronic devices Both BN and BC material systems generally deposited using chemical vapour deposition CVD are limited by the lack of control in depositing epitaxial films In my thesis work I have studied the evolution of various crystal phases of BN and BC and the factors that affect them during their CVD processes I deposited and compared the growth of BN on Al₂O₃ 0001 11 2 over bar 0 1 1 over bar 02 and 10 1 over bar 0 substrates and used two organoboranes as boron precursors Only Al₂O₃ 11 2 over bar 0 and Al₂O₃ 0001 rendered crystalline films while the BN growth on the remaining substrates was X ray amorphous Furthermore the less investigated Al₂O₃ 11 2 over bar 0 had better crystalline quality versus the commonly used Al₂O₃ 0001 To further understand this I studied crystalline BN thin films on an atomic scale and with a time evolution approach uncovering the influence of carbon on hexagonal BN h BN I showed that h BN nucleates on both substrates but then either polytype transforms to rhombohedral BN r BN in stages turns to less ordered turbostratic BN or is terminated An increase in local carbon content is the cause of these changes in epitaxial BN films during CVD From the time evolution we studied the effect of Al₂O₃ modification on h BN nucleation during CVD The interaction between boron and carbon during BN growth motivated studies also on the B_xC materials B_xC was deposited using CVD at different temperatures on 4H SiC 0001 Si face and 4H SiC 000 1 over bar C face substrates Epitaxial rhombohedral B₄C r B₄C grew at 1300 C on the C face while the films deposited on the Si face were polycrystalline Comparing the initial nucleation layers on both 4H SiC substrates on an atomic scale we showed that no interface phenomena are affecting epitaxial r B₄C growth conditions We suggest that the difference in surface energy on the two substrate surfaces is the most plausible reason for the differences in epitaxial r B₄C growth conditions In this thesis work I identify the challenges and propose alternative routes to synthesise epitaxial BN and B₄C materials using CVD This fundamental materials science work enhances the understanding of growing these material systems epitaxially and in doing so furthers their development Publications of the National Bureau of Standards United States.
