

## Focus

## Overview

Before beginning this section review with your students the objectives listed in the Student Edition. Tell students that the purpose of this lesson is to teach them about the general structural and physiological characteristics of mollusks, including their body plan and organ systems. They will also learn about distinguishing characteristics of the three major groups of mollusks: the gastropods, bivalves, and cephalopods.

**TAKS 2** **8a** **8C**

## Bellringer

Ask students to think about a snail, a clam, and an octopus. Tell students that these are all mollusks. Ask them to write down some characteristics that these animals have in common. (Students will most likely note the prominent foot, or its modification.) **TAKS 2** **8a** **8C**

## Motivate

## Identifying Preconceptions

**BASIC**

Ask students to hypothesize why some mollusks secrete a shell and others do not. Guide their thinking by asking how mollusks without shells might protect themselves. (Students should recall that squids and octopuses spray ink and can propel themselves away from danger. Slugs secrete noxious substances that discourage predators.) **TAKS 3** **8a** **7B**

## Objectives

- Summarize the evolutionary relationship between mollusks and annelids. **TBS** **8B** **8C** **TAKS 3** **TAKS 9**
- Describe the key characteristics of mollusks. **8C** **TAKS 2**
- Describe excretion, circulation, respiration, and reproduction in mollusks. **8A** **TAKS 2**
- Compare the body plans and feeding adaptations of gastropods, bivalves, and cephalopods. **8B** **8C** **TAKS 3**

## A True Coelom

While most of the simple invertebrates you read about in the last chapter may be unfamiliar to you, chances are good that you have seen many mollusks and annelids. Snails, slugs, oysters, clams, scallops, octopuses, and squids are all mollusks. If you have seen an earthworm, then you know what an annelid is. While a snail may not seem to have much in common with an earthworm, these two very different-looking animals are related.

Mollusks and annelids were probably the first major groups of organisms to develop a true coelom. (Recall that in animals that have a true coelom, or body cavity, the gut and other internal organs are suspended from the body wall and cushioned by the fluid within the coelom.) Another feature shared by mollusks and annelids is a larval stage called a **trochophore**. (TRAYK oh fere), which develops from the fertilized egg. In some species, the trochophore, shown in **Figure 1**, is free-swimming and propels itself through the water by movement of cilia on its surface. The presence of a trochophore larva in mollusks and annelids suggests that they share a common ancestor. **1** **2**

Members of the phylum Mollusca make up the second largest animal phyla, exceeded only by phylum Arthropoda. Mollusks are abundant in almost all marine, freshwater, and terrestrial habitats. There are more species of terrestrial mollusks than there are of terrestrial vertebrates. These mollusks often go unnoticed because people are not accustomed to looking for them. Seven classes of mollusks make up the phylum Mollusca. The three major classes are Gastropoda (snails and slugs), Bivalvia (clams, oysters, and scallops), and Cephalopoda (octopuses and squids). **1** **2**

**Figure 1** Trochophore larva

This microscopic trochophore larva has a belt of cilia that circles its body. The beating of the cilia propels the trochophore through the water.

## Evolutionary Milestone

**3** Coelom

A true coelom develops entirely within the mesoderm. Contact between the mesoderm and endoderm during the development of the embryo leads to the development of complex organs.

## Section 1 Study Guide Mollusks:

The Mollusks Charles F. Sturm, Timothy A. Pearce, Ángel Valdés, 2006 Mollusks have been important to humans since our earliest days Initially when humans were primarily interested in what they could eat or use mollusks were important as food ornaments and materials for tools Over the centuries as human knowledge branched out and individuals started to study the world around them mollusks were important subjects for learning how things worked In this volume the editors and contributors have brought together a broad range of topics within the field of malacology It is our expectation that these topics will be of interest and use to amateur and professional malacologists *Biology and Evolution of the Mollusca, Volume 1* Winston Frank Ponder, David R. Lindberg, Juliet Mary Ponder, 2019-11-18 Molluscs comprise the second largest phylum of animals after arthropods occurring in virtually all habitats Some are commercially important a few are pests and some carry diseases while many non marine molluscs are threatened by human impacts which have resulted in more extinctions than all tetrapod vertebrates combined This book and its companion volume provide the first comprehensive account of the Mollusca in decades Illustrated with hundreds of colour figures it reviews molluscan biology genomics anatomy physiology fossil history phylogeny and classification This volume includes general chapters drawn from extensive and diverse literature on the anatomy and physiology of their structure movement reproduction feeding digestion excretion respiration nervous system and sense organs Other chapters review the natural history including ecology of molluscs their interactions with humans and assess research on the group Key features of both volumes up to date treatment with an extensive bibliography thoroughly examines the current understanding of molluscan anatomy physiology and development reviews fossil history and phylogenetics overviews ecology and economic values and summarises research activity and suggests future directions for investigation Winston F Ponder was a Principal Research Scientist at The Australian Museum in Sydney where he is currently a Research Fellow He has published extensively over the last 55 years on the systematics evolution biology and conservation of marine and freshwater molluscs as well as supervised post graduate students and run university courses David R Lindberg is former Chair of the Department of Integrative Biology Director of the Museum of Paleontology and Chair of the Berkeley Natural History Museums all at the University of California He has conducted research on the evolutionary history of marine organisms and their habitats on the rocky shores of the Pacific Rim for more than 40 years The numerous elegant and interpretive illustrations were produced by Juliet Ponder Prentice Hall Science Explorer Michael J. Padilla, 2002 **Reader's Guide to Periodical Literature Supplement**, 1927 **Introduction to Paleobiology and the Fossil Record** Michael J. Benton, David A. T. Harper, 2020-06-02 This book presents a comprehensive overview of the science of the history of life Paleobiologists bring many analytical tools to bear in interpreting the fossil record and the book introduces the latest techniques from multivariate investigations of biogeography and biostratigraphy to engineering analysis of dinosaur skulls and from homeobox genes to cladistics All the well known fossil groups are included

including microfossils and invertebrates but an important feature is the thorough coverage of plants vertebrates and trace fossils together with discussion of the origins of both life and the metazoans All key related subjects are introduced such as systematics ecology evolution and development stratigraphy and their roles in understanding where life came from and how it evolved and diversified Unique features of the book are the numerous case studies from current research that lead students to the primary literature analytical and mathematical explanations and tools together with associated problem sets and practical schedules for instructors and students New to this edition The text and figures have been updated throughout to reflect current opinion on all aspects New case studies illustrate the chapters drawn from a broad distribution internationally Chapters on Macroevolution Form and Function Mass extinctions Origin of Life and Origin of Metazoans have been entirely rewritten to reflect substantial advances in these topics There is a new focus on careers in paleobiology
