Directions: Answer the following questions on this sheet.

5. List three characteristics of waves that you can determine:

Wavelength, Amplitude, and Frequency

6. Which quantity, the frequency or the wavelength, do you need?

Wavelength is measured from 0 to the next crest or trough.

7. If the frequency of a given wave is known, what quantity is the wavelength?

Wavelength is calculated by dividing the speed of the wave by the frequency.

Directions: Study the graph of the wave shown in the figure below. The wave is a snapshot of a string at a particular instant.

Wave	Wavelength	Amplitude
1. Wavelength	2.0 m	0.1 m
2. Amplitude	3.0 m	0.1 m

8. What is the frequency of the wave? (The wave has a wavelength of 2.0 m.)

The frequency is 0.5 Hz. (The wave has a speed of 1.0 m/s.)

9. What is the period of the wave?

basics of sound and hearing professor Ibrahim elnoshokaty , 2022-10-30 In physics sound is a vibration that propagates as an acoustic wave through a transmission medium such as a gas liquid or solid In human physiology and psychology sound is the reception of such waves and their perception by the brain 1 Only acoustic waves that have frequencies lying between about 20 Hz and 20 kHz the audio frequency range elicit an auditory percept in humans In air at atmospheric pressure these represent sound waves with wavelengths of 17 meters 56 ft to 1 7 centimeters 0 67 in Sound waves above 20 kHz are known as ultrasound and are not audible to humans Sound waves below 20 Hz are known as infrasound Different animal species have varying hearing ranges Acoustics is the interdisciplinary science that deals with the study of mechanical waves in gasses liquids and solids including vibration sound ultrasound and infrasound A scientist who works in the field of acoustics is an acoustician while someone working in the field of acoustical engineering may be called an acoustical engineer 2 An audio engineer on the other hand is concerned with the recording manipulation mixing and reproduction of sound Applications of acoustics are found in almost all aspects of modern society subdisciplines include aeroacoustics audio signal processing architectural acoustics bioacoustics electro acoustics environmental noise musical acoustics noise control psychoacoustics speech ultrasound underwater acoustics and vibration
