Solids, Liquids, and Gases

◆ Understanding Main Ideas

Use the diagram to answer Questions 1 through 3.
Write your answers on a separate sheet of paper.

1. Identify the physical state of the substances pictured.
2. What would happen to the shape of each substance if the jars were broken? Use the differences in the physical state of the substances to explain your answer.
3. Would the volume of each substance change if each were moved into a larger container? Explain.

2

◆ Building Vocabulary

Write a definition for each of the following terms in the spaces provided.

4. solid particles are packed very close together & stay in a fixed position, definite shape & volume.
5. liquid particles are slightly less packed than solids, they can freely move past each other, definite volume, indefinite shape.
6. gas particles spread apart filling all space available to them, moving at high speeds in all directions, indefinite shape, indefinite volume.
7. viscosity resistance of a liquid to flowing. the higher the viscosity, the slower the flow.
8. amorphous solid particles are not arranged in a regular pattern, no definite melting point.
9. crystalline solid particles are in a regular repeating pattern forming crystals, definite melting point.
10. fluid a substance that flows, a liquid or gas.

Cellular Automata and Modeling of Complex Physical Systems Paul Manneville, Nino Boccara, Gerard Y.

Vichniac, Roger Bidaux, 2012-12-06 Cellular automata are fully discrete dynamical systems with dynamical variables defined at the nodes of a lattice and taking values in a finite set Application of a local transition rule at each lattice site generates the dynamics The interpretation of systems with a large number of degrees of freedom in terms of lattice gases has received considerable attention recently due to the many applications of this approach e g for simulating fluid flows under nearly realistic conditions for modeling complex microscopic natural phenomena such as diffusion reaction or catalysis and for analysis of pattern forming systems The discussion in this book covers aspects of cellular automata theory related to general problems of information theory and statistical physics lattice gas theory direct applications problems arising in the modeling of microscopic physical processes complex macroscopic behavior mostly in connection with turbulence and the design of special purpose computers Annual Reports on NMR Spectroscopy, 1990-01-23 Annual Reports on NMR Spectroscopy
