Sample Manual Production Planning:

Advanced Planning and Scheduling in Manufacturing and Supply Chains Yuri Mauergauz, 2016-04-25 This book is a guide to modern production planning methods based on new scientific achievements and various practical planning rules of thumb. Several numerical examples illustrate most of the calculation methods while the text includes a set of programs for calculating production schedules and an example of a cloud based enterprise resource planning ERP system. Despite the relatively large number of books dedicated to this topic, *Advanced Planning and Scheduling* is the first book of its kind to feature such a wide range of information in a single work, a fact that inspired the author to write this book and publish an English translation. This work consists of two parts with the first part addressing the design of reference and mathematical models, bottleneck models and multi criteria models and presenting various sample models. It describes demand forecasting methods and also includes considerations for aggregating forecasts. Lastly, it provides reference information on methods for data stocking and sorting. The second part of the book analyzes various stock planning models and the rules of safety stock calculation while also considering the stock traffic dynamics in supply chains. Various batch computation methods are described in detail while production planning is considered on several levels including supply planning for customers, master planning and production scheduling. This book can be used as a reference and manual for current planning methods. It is aimed at production planning department managers, company information system specialists as well as scientists and PhD students conducting research in production planning. It will also be a valuable resource for students at universities of applied sciences.

Factory Planning Manual Michael Schenk, Siegfried Wirth, Egon Müller, 2009-10-29 The central purpose of this book is to impart knowledge, skills and practical implementation methods for the planning and operation of adaptable production facilities and factories. It addresses planning methods and procedures for various types of production facilities up to and including entire factories and is aimed at practicing factory planners and students alike. The book provides facts and demonstrates practical processes using case studies for the purposes of illustration so that ultimately skills can be acquired that make independent practical implementation and application possible. It is based on up to the minute practical experience and universally applicable knowledge of the planning and technological design of adaptable production facilities, manufacturing and assembly and factories. In comparison to existing thematically similar reference books, what is innovative about this manual is that it provides the impulse for a more flexible planning approach for the efficient design of adaptable production facilities using responsive unconventional planning and organizational solutions. The book aims to provide a way of integrating systematic and situation driven planning methods in a meaningful way. Situation driven planning is becoming increasingly important to production facilities in these fast moving times of change, in particular in terms of resource and energy efficiency. Existing technical and organizational course of action in terms of resources, both human and technical, need to be selected for the specific case at hand and changes to workshops, products, processes and equipment need to be managed.
