Advanced Pre-Med Studies Parent Lesson Plan, 2013-08-01 Advanced Pre Med Studies Course Description Semester 1

From surgery to vaccines man has made great strides in the field of medicine Quality of life has improved dramatically in the last few decades alone and the future is bright But students must not forget that God provided humans with minds and resources to bring about these advances A biblical perspective of healing and the use of medicine provides the best foundation for treating diseases and injury In *Exploring the History of Medicine* author John Hudson Tiner reveals the spectacular discoveries that started with men and women who used their abilities to better mankind and give glory to God The fascinating history of medicine comes alive in this book providing students with a healthy dose of facts mini biographies and vintage illustrations It seems that a new and more terrible disease is touted on the news almost daily The spread of these scary diseases from bird flu to SARS to AIDS is a cause for concern and leads to questions such as Where did all these germs come from and how do they fit into a biblical world view What kind of function did these microbes have before the Fall Does antibiotic resistance in bacteria prove evolution How can something so small have such a huge deadly impact on the world around us Professor Alan Gillen sheds light on these and many other questions in *The Genesis of Germs* He shows how these constantly mutating diseases are proof for devolution rather than evolution and how all of these germs fit into a biblical world view Dr Gillen shows how germs are symptomatic of the literal Fall and Curse of creation as a result of man's sin and the hope we have in the coming of Jesus Christ

Semester 2 *Body by Design* defines the basic anatomy and physiology in each of 11 body systems from a creationist viewpoint Every chapter explores the wonder beauty and creation of the human body giving evidence for creation while exposing faulty evolutionist reasoning Special explorations into each body system look closely at disease aspects current events and discoveries while profiling the classic and contemporary scientists and physicians who have made remarkable breakthroughs in studies of the different areas of the human body Within *Building Blocks in Life Science* you will discover exceptional insights and clarity to patterns of order in living things including the promise of healing and new birth in Christ Study numerous ways to refute the evolutionary worldview that life simply evolved by chance over millions of years The evolutionary worldview can be found filtered through every topic at every age level in our society It has become the overwhelmingly accepted paradigm for the origins of life as taught in all secular institutions This dynamic education resource helps young people not only learn science from a biblical perspective but also helps them know how to defend their faith in the process

Old Drugs: Confronting Recent Advancements and Challenges Anna Wiktorowska-Owczarek, Magdalena Jasinska-Stroschein, Diego Iacono, 2025-04-01 Over the years there has been an increasing demand for an effective and cost efficient drug discovery process The study of old and previously approved drugs for newer indications or their re evaluation based on newly identified different mechanisms of action has become a major focus of drug discovery particularly when it comes to treating chronic or complex multigenetic diseases such as cancer autoimmune neurodegenerative disorders and psychiatric conditions This approach is actually particularly appealing since it saves time and resources and reduces the risk of failure The history of pharmacology is replete with examples of drugs that have undergone significant shifts in their clinical or preventive use over time such as acetylsalicylic acid thalidomide duloxetine and dapagliflozin For instance acetylsalicylic acid has been used for over a century as an anti inflammatory and analgesic but it is currently used as an antiplatelet agent Thalidomide was previously removed from the market because of its teratogenic effects which were associated with the inhibition of the synthesis of tumor necrosis factor alpha and other cytokines but it has since emerged as an immunomodulator for the treatment of various diseases including erythema nodosum leprosum Intriguingly repurposed drugs have also been shown to control synaptic potentiation associated with neurological and psychiatric disorders which have opened unimaginable scenarios a few years ago
