

Drafting an Exploratory Essay

Exploratory papers are NOT argument papers. An exploratory assignment is usually given so that students find ways to branch out in a specific topic without taking a stance. Exploratory papers can range from a full research paper to a short essay.

INTRODUCTION

The introduction should do several things for the reader:

Set context – this is where the author can begin to give general background information and set up a “map” of what the paper will discuss.

State importance – the introduction should also explain why the topic is important, it should compel the audience to read further and create interest in the topic.

State the question or topic of exploration – this can be one or several sentences or questions that states what the author is interested in finding out, why, and how they intend to do it.

THE BODY

An acceptable general structure for exploratory papers is given below:

Each paragraph or section should explain what source was used, say why it was chosen, include information found using the source, explain why the information is important, and reflect on the source and its information.

This format is meant as a basic outline and does not need to be repeated exactly the same way for every source.

CONCLUSION

The conclusion is very similar to the introduction in that it gives a general overview of what has been discussed. This section also ties up any loose ends not confronted in the body of the paper. Many times, the question is restated in the conclusion for reinforcement.

Writing in Response Matthew Parfitt, 2011-12-23 Writing in Response is a flexible brief rhetoric that offers a unique focus on the critical practices of experienced readers analysis and reflection the skills at the heart of academic writing It helps students compose academic essays by showing how active reading and exploratory writing bring fresh ideas to light and how informal response is developed into polished documented prose Extensively class tested Writing in Response emphasizes the key techniques common to reading thinking and writing throughout the humanities and social sciences by teaching students the value of a social incremental and recursive writing process Read the preface Small Sample Size Solutions Rens van de Schoot, Milica Miočević, 2020-02-13 Researchers often have difficulties collecting enough data to test their hypotheses either because target groups are small or hard to access or because data collection entails prohibitive costs Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research Each chapter illustrates statistical methods that allow researchers to apply the optimal statistical model for their research question when the sample is too small This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations and solutions include both classical and Bayesian methods All proposed solutions are described in steps researchers can implement with their own data and are accompanied with annotated syntax in R The methods described in this book will be useful for researchers across the social and behavioral sciences ranging from medical sciences and epidemiology to psychology marketing and economics *Instructor's Manual* Patrick Geary, Patricia O'Brien, Nancy Wood, 2003-09 **Industry 5.0 and Paradigm Shift—Emerging Challenges** Namit Gupta, Roopa Shinde, Rakesh Kumar Malviya, Anjali Gupta, 2023-01-23 Industry 5.0 is the successor of the Industry 4.0 concept which employed high technology in the manufacturing industry Industry 5.0 is a new idea that adds a human touch to the work of robots and smart machines The basic idea of humans and machines working together is to increase efficiency and effectivity like the Internet of things IoT It aims to merge the increasing cognitive computing abilities of the robots with the intelligence and resourcefulness of the humans The progress of Industry 5.0 is inevitable As the technology grows more each day we find ways to make our work simpler The development of such technologies to make the world more efficient requires its manufacturers i.e humans who collaborate with these machines and technologies Humans are indispensable resources as what a machine can do is limited And with all these efficiencies we have come so far there is no path leading us back With adoption of new concepts comes a paradigm shift as development continues and we move from Industry 4.0 which speaks of the future of production its primary purpose continues to be achieving seamless connectivity between machines

and IT systems for higher productivity and efficiencies across the value chain Overall it focuses mainly on traditional financial and operational KPIs Whereas Industry 5.0 gives a human touch to the concept of 4.0 keeping in mind the well being of the environment and society making the machines and humans work together on a path of Green Future Industry 5.0 has the balance of both humans and technologies which benefits the ecosystem with discovery of new energy sources and renewable resources helping in a sustainable working environment It can be used to reduce harmful residue caused due to manufacturing processes and recycle rare materials Taking this theme the multidisciplinary congress on Industry 5.0 and Paradigm Shift Emerging Challenges will highlight research challenges and open issues that should be further developed to realize Industry 5.0
