Biology and Medicine U S Atomic Energy Commission by Edgerton Cermeshausen AND Grier Inc between Sept 4 and Oct 16 1961 The survey was part of a nationwide program to measure present environmental levels of gamma radiation Approximately 6000 traverse miles were flown at an altitude of 500 ft above the ground in the area which consists of a 50 mile square centered on Camden N J the part of New Jersey south of this square and a strip about 15 miles wide southwest of Delaware Bay The EG AND G ARMS II instrumentation was used in the survey The data are presented in aeroradioactivity units or areas with similar gamma radiation rates at 500 ft at two map scales 1 generalized at about 1 1 000 000 and 2 detailed at 1 250 000 The aeroradioactivity in the area is less than 800 counts sec except for four small areas in the northwest part of the area where it is less than 1200 counts sec In most of the New Jersey and Delaware parts of the area the radioactivity is less than 400 counts sec Aerial measurements of ground radioactivity in the ARMS II Camden Delaware Valley area were everywhere consistent with what was expected considering the geology of the area The south part of the area has a low radioactivity and the surficial materials are mostly sands and gravels which are commonly weakly radioactive The north part of the area is slightly more radioactive which would be expected from the types of sedimentary igneous and meta morphic rocks exposed there Artificial radionuclides are probably present in only small quantities because the maximum background gamma radioactivity in many places is less than 200 counts sec
