resources for our day to day lives and business operations. For all its importance this domain has evolved drastically from the traditional wired networks to Bluetooth infrared waves micro waves radio waves and satellite networks. Nowadays network technologies are not only restricted to computer laboratories offices or homes many other diverse areas have been witnessed where network technologies are being used based on the applications and needs such as vehicular ad hoc networks underwater networks and the Internet of Things. Along with the hardware based and physical network technologies a lot of research has been carried out by researchers from academia and industry to develop emerging software based network technologies such as network software architectures middleware and protocol stacks. The software based network technologies become the main driving force behind the paradigm shift in this domain and have invented many new network technologies such as grid computing cloud computing fog computing edge computing software defined networks content centric networks and so on. On the other hand a lot of efforts have been made in cellular network technologies to improve the user experience and as a consequence emerging cellular network technologies like LTE VoLTE and 5G have been invented. Due to its demand and importance in present and future scenarios numerous efforts have been done in the networking domain by the researchers a lot of work is still ongoing and many more possibilities have yet to be explored. Therefore there is a need to keep track of advancements related to the network technologies and further investigate several ongoing research challenges for the ease of users.
