Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary, middle-aged women who were randomly assigned to either a control group or an exercise group. The control group performed no exercise, while the exercise group performed a 12-week training program consisting of three sessions per week of 30 minutes of moderate-intensity aerobic exercise. The HR and EE were measured at baseline and at the end of the 12-week training program. The results showed that the exercise group had a significantly lower HR and higher EE than the control group at the end of the 12-week training program. These findings suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - 1) Turn off the lights at the end of the day.
 - 2) Avoid excessive light intensity, the length of the day and the light spectrum (the color of the light) are important.
- The end of the day is the best time to change the light spectrum. The producer should be looking for the color of the light to be similar to the color of the sky at the end of the day. The producer should also be looking for the color of the light to be similar to the color of the sky at the end of the day.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A government producer (as in a public utility) that is required to supply a certain amount of output will not be able to adjust its output level if its price is too low or too high. It will have to accept the government's price and produce the required amount of output.

Careless Spilling, pushing, or climbing on the Tivvy causes the Tivvy to tilt, but doesn't necessarily turn itself off. It will keep going until it reaches the limit. It's the same way you turn off a fan: you have to push the fan's on/off switch. It's the same way you turn off a light: you have to push the light's on/off switch.
