their position depending in which zone the ball is in they must know when to fill an empty zone when it has been vacated or to move into a zone to create superiority of numbers A general rule of thumb is that no more than three players will be in a horizontal line and not more than two in a vertical line this helps give the player on the ball two three passing options The entire game can be taught using the grid from build up play to the attacking third When using the grid to teach positional soccer there are many ways to utilize it One way is to set up trainings that require players to operate inside the positional grid adhering to specific conditions but still allowing a degree tactical freedom while encouraging problem solving An example of this would be requiring five shorter passes on one side of the field before a long pass can be made switching the field to the far wide player The next type of training can use the grid as more of specific road map that must be strictly adhered to An example of this would be working on playing the ball out of the back Each player will be assigned a specific part of the grid to be in as a standard way of operating out of the back is established The other beneficial aspect of using the positional grid is that it organizes space on the field in a realistic way for players When players train tactics in specific game realistic spaces their soccer awareness tactical sense and soccer IQ benefit Training in the positional grid helps players better judge distance space and time in relationship to carrying out the desired tactics I recommend training with the grid and then removing the grid at the end so that spatial relationship is further reinforced
