### PERIMETER AND AREA

#### Quick Review

#### VOCAB

#### PERIMETER

Perimeter is the total distance around the outside edge of a shape.

Addition Method	Formula
You must know the measurement of all of the sides.	This formula is for rectangles only!
Add the lengths of all of the sides together.	$P = 2l + 2w$

#### AREA

The area of a figure is how much space it takes up. You need to know the measurements for the length and width for rectangles, and the base and height for parallelograms.

Area is measured with squares. When you find the area of a figure, you are determining how many individual 1x1 squares would fit inside it. Since the unit of measurement is required, it is written with the units required, such as  $\text{cm}^2$ .

#### CALCULATING AREA

Area is calculated with multiplication.

$$A = l \times w$$

$$A = b \times h$$

First carefully identify the measurements you need to use. Then multiply them.

### AREA OF PARALLELOGRAMS

#### Quick Check

- Find the perimeter of each figure.

- Find the area of each figure.

- For each parallelogram, circle the values for its height and its base. Draw an X over the side length that you will not need.

- Allow us to bring in a sentence and to try to decide between making a rectangle that is 10 ft. long and 6 ft. wide, or making a square with 8 ft. sides.

Label the measurements of the sides for these two designs.

Find the perimeter of each.

Find the area of each.

In your opinion, which design is better?
