Polymer Chemistry Introduction Malcolm Stevens:

Polymer Chemistry Malcolm P. Stevens, 1990 Now updated to incorporate recent developments in the field the third edition of this successful text offers an excellent introduction to polymer chemistry Ideal for graduate students advanced undergraduates and industrial chemists who work with polymers it is the only current polymer textbook that discusses polymer types according to functional groups It provides a comprehensive and up to date overview of the chemistry of macromolecular substances with particular emphasis on polymers that are important commercially and the properties that make them important Major topics include polymer synthesis and nomenclature molecular weight and molecular weight distribution reactions of polymers recycling of polymers methods used for characterizing and testing polymers morphology stereoregular polymers polymer blends step growth chain growth and ring opening polymerization commercially important addition and condensation polymers heterocyclic polymers inorganic polymers and natural polymers Review exercises many including journal references are provided to help lead students into the polymer literature *Polymer Chemistry* 3 e offers the most up to date treatment available of new developments in this rapidly changing field It covers dendritic and hyperbranched polymers olefin polymerization using metallocene catalysts living free radical polymerization biodegradable bacterial polyesters mass spectrometric methods for determining molecular weights or polymers atomic force microscopy for characterizing polymer surfaces and polymers exhibiting nonlinear optical properties
