

Lesson 11: Properties of Tangents

Student Outcomes

- Students demonstrate that a tangent to a circle at a given point P is perpendicular to the radius drawn to that point.
- Students understand tangents to a circle through a point P outside.
- Students prove that tangent segments to a circle from the same point are congruent lengths.

Lesson Overview

Pages 1–3 begin the study of tangents to a circle. Lesson 11 is the concluding lesson and requires several components to fully understand tangents. The study of tangents continues in Lesson 12 and 13.

During the lesson, model the following definitions thoroughly.

Intersection of a circle: The intersection of a circle with another (straight) circle is the point of tangency to the circle where they meet. (See the picture.)

A point on the intersection circle is said to be inside the circle, and all the points of the circle with its center.

Radius or radius: The distance of a circle with center O and radius r is the length of the line segment from the center O to the circle's edge.

A point outside a circle is said to be the outside the circle.

Classroom

Opening (20 minutes)

- Give a circle to each student.
- Students draw a circle radius line.

Have students begin themselves and for the lesson.

- Introduce together the diagram of the circle.
