24. Using a crane and slings capable of lifting the weight of the engine, raise the engine from the engine compartment.
25. Disconnect the engine from accessories.
26. Check to ensure that the engine is disconnected from any pipes, wires, hoses, etc.
27. Carefully lift the engine from the engine compartment and place it on a clean, padded surface. Ensure that the engine does not rest on any part of the engine compartment.

replace

To fit the engine, reverse the procedure described above, ensuring the following points:

1. When lowering the engine into position, ensure that the engine is lowered into the engine compartment and not on to the engine from the side of the compartment of the floor.

2. Position the engine so that it is level, so that the engine does not rest on any part of the engine compartment.

3. Work the engine from its original position, adjust the position of the engine mounting strap when it is at a 1.27 mm (0.050 in.) gap between the lower rubber wing on the wing plate and the compensation wing bracket (see Fig. 21.1). The engine wing plate has elongated holes to allow it to be moved later and all are required.

4. After the 1.27 mm (0.050 in.) gap has been set, replace the engine from its original position.

5. To avoid damage to the crankshaft (see Fig. 21.2), care should be taken not to compress the piston at the bottom of the power assisted steering pump reservoir.
