Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly assigned to a 12-week training program or a control group. The training program consisted of three sessions per week, each lasting 30 minutes, and included a combination of aerobic and resistance exercises. The control group consisted of 12 sedentary women who did not participate in the training program. The HR and EE were measured at rest and during the training sessions. The results showed that the training program significantly increased the HR and EE of the subjects compared to the control group. The HR increased from 68 to 78 beats per minute, and the EE increased from 1,200 to 1,500 kcal per day. The findings suggest that a 12-week training program can effectively increase the HR and EE of sedentary, middle-aged women.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - Turn off the lights at the end of the work day.
 - Use red light for night shifts, as the wavelength of this light may be less disruptive to the circadian rhythm.
- The end of the shift should be followed by a period of relaxation, and the worker should be encouraged to sleep during the day. The worker should be encouraged to sleep during the day. The worker should be encouraged to sleep during the day.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a serious problem with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, suppose the price for the output rises. The producer will want to produce more of the output, and this will require hiring more workers. The producer will also want to use more of the other inputs, and this will require hiring more of those inputs. The producer will also want to use more of the other inputs, and this will require hiring more of those inputs.
