Mahmoud Barhamgi,Hua Wang,Xin Wang,2024-11-26 This five volume set LNCS 15436 15440 constitutes the proceedings of the 25th International Conference on Web Information Systems Engineering WISE 2024 held in Doha Qatar in December 2024 The 110 full papers and 55 short papers were presented in these proceedings were carefully reviewed and selected from 368 submissions The papers have been organized in the following topical sections as follows Part I Information Retrieval and Text Processing Text and Sentiment Analysis Data Analysis and Optimisation Query Processing and Information Extraction Knowledge and Data Management Part II Social Media and News Analysis Graph Machine Learning on Web and Social Trustworthy Machine Learning and Graph Data Management Part III Recommendation Systems Web Systems and Architectures and Humans and Web Security Part IV Learning and Optimization Large Language Models and their Applications and AI Applications Part V Security Privacy and Trust Online Safety and Wellbeing through AI and Web Technologies Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang,Stefan Wermter,Fuchun Sun,Changshui Zhang,Andreas K. Engel,Brigitte Röder,Xiaolan Fu,Gui Xue,2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology

and neuroscience **Artificial Intelligence, Ethics and the Future of Warfare** Kaushik Roy, 2024-05-23 This volume examines how the adoption of AI technologies is likely to impact strategic and operational planning and the possible future tactical scenarios for conventional unconventional cyber space and nuclear force structures In addition to developments in the USA Britain Russia and China the volume also explores how different Asian and European countries are actively integrating AI into their military readiness It studies the effect of AI and related technologies in training regimens and command structures The book also covers the ethical and legal aspects of AI augmented warfare The volume will be of great interest to scholars students and researchers of military and strategic studies defence studies artificial intelligence and ethics
