Concrete in the Service of Mankind Ravindra Dhir, Thomas Dyer, 1996-06-13 Concrete is ubiquitous and unique found in every developed and developing country Indeed there are no alternatives to concrete as a volume construction material for infrastructure This raises important questions of how concrete should be designed and constructed for cost effective use in the the short and long term and to encourage further radical development Equally it must be environmentally friendly during manufacture in an aesthetic presentation in structures and in the containment of harmful materials The central theme of the Congress is Concrete in the Service of Mankind under which five self contained Conferences each dealing with a particular aspect are planned The Congress offers opportunity to discuss how to improve and extend this service to mankind using responsible exploitation underwritten by sound technical understanding and research base It brings together the shared skills and experience of the various disciplines involved in the construction process world wide This major publication continues the tradition established by Dundee University of organizing major international conferences every three years dealing with some aspect of concrete and also the link between Spon and Dundee University for publication of the proceedings This book should be of interest to concrete technologists contractors civil engineers consultants government agencies research organizations

Rotary Kilns Akwasi A. Boateng, 2015-11-13 Rotary Kilns rotating industrial drying ovens are used for a wide variety of applications including processing raw minerals and feedstocks as well as heat treating hazardous wastes They are particularly critical in the manufacture of Portland cement Their design and operation is critical to their efficient usage which if done incorrectly can result in improperly treated materials and excessive high fuel costs This professional reference book will be the first comprehensive book in many years that treats all engineering aspects of rotary kilns including a thorough grounding in the thermal and fluid principles involved in their operation as well as how to properly design an engineering process that uses rotary kilns This new edition contains an updated CFD section with inclusion of recent case studies and in line with recent developments covers pyrolysis processes torrefaction of biomass application of rotary kilns in CO₂ capture and information on using rotary kilns as incinerators for hydrocarbons Provides essential information on fluid flow granular flow mixing and segregation and aerodynamics during turbulent mixing and recirculation Gives guidance on which fuels to choose including options such as natural gas versus coal fired rotary kilns Covers principles of combustion and flame control heat transfer and heating and material balances New edition contains information on pyrolysis processes with low temperatures and torrefaction of biomass It also covers calcination of petcoke how rotary kilns are used as incinerators for chlorinated hydrocarbons Includes updated material on CFD simulation of kiln gas and solids flow with a selection of recent case studies

Hazardous Waste Incineration and Human Health Curtis C. Travis, S. Chrystal Cook, 1989-03-31 This informative publication provides an introduction to the public health implications of hazardous waste incineration The complexities involved in defining measuring and regulating

the nation's hazardous waste are discussed as well as brief descriptions of the hazardous waste incineration process. Summaries of the data base for the incinerator test burns conducted by or for the Environmental Protection Agency (EPA) are presented along with a description of the four components of risk analysis, sample calculations of both carcinogenic and noncarcinogenic health risk estimates and the predictive methodology employed in quantitative risk assessment for hazardous waste incinerators. Also discussed are the risk estimates for exposure to hazardous waste incinerator emissions, inhalation exposure to incinerator stack releases of heavy metals and to polychlorinated biphenyl compounds and ingestion exposure to incinerated releases through the terrestrial food chain. This book will be of interest to local regulatory officials, incineration facility operators, researchers in the hazardous waste areas and concerned citizens.

China's Technological Catch-Up Strategy Michael T. Rock, Michael Toman, 2015-02-09 Prior to 1979 China had a bifurcated and geographically dispersed industrial structure made up of a relatively small number of large scale state owned enterprises in various industries alongside numerous small scale energy intensive and polluting enterprises. Economic reforms beginning in 1979 led to the rapid expansion of these small scale manufacturing enterprises in numerous energy intensive industries such as aluminum, cement, iron and steel and pulp and paper. Subsequently the government adopted a new industrial development strategy labeled "grasp the large let go the small". The aims of this new policy were to close many of the unprofitable small scale manufacturing plants in these and other industries, create a small number of large enterprises that could compete with OECD multinationals, entice these larger enterprises to engage in high speed technological catch up and save energy. China's Technological Catch Up Strategy traces the impact of this new industrial development strategy on technological catch up, energy use and CO₂ emissions. In doing so the authors explore several detailed enterprise level case studies of technological catch up, develop industry wide estimates of energy and CO₂ savings from specific catch up interventions and present detailed econometric work on the determinants of energy intensity. The authors conclude that China's strategy has contributed to substantial energy and CO₂ savings but it has not led to either a peaking of or a decline in CO₂ emissions in these industries. More work is needed to cap and reduce China's CO₂ emissions.
