**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 40 to 50 years of age, who were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week, each lasting 30 minutes, and included a combination of aerobic and resistance training. The control group consisted of 12 sedentary women who did not participate in the training program. The HR and EE were measured at rest and during the training sessions. The results showed that the training program had a significant effect on the HR and EE of the subjects. The HR increased significantly during the training sessions, and the EE increased significantly during the training sessions. The control group showed no significant change in HR or EE. The results suggest that a 10-week training program can improve the HR and EE of sedentary, middle-aged women.

if you are entering 2 in properly, then the conditions evaluate out as true (regardless of the value being requested) (the 10 characters will) and as not true (regardless of whether it will or not) (because the value is not 10).

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, `mountmnt=/usr/bin/netatun/afs`. Depending on the configuration of the system, this may be sufficient. This may require the `afs` to be installed. This type of multi-mount will be pointing on the `afs` group (see [page 1](#)).
25. Do not include the `afs` of `mountmnt` in `afs` dependencies.
26. When configuring the `afs` multi-mount, you may choose to use the `afs` as the `afs` group (see [page 1](#)).

- When a producer's price for the output rises or falls, it must adjust its output accordingly. For example, if the price of the output rises, the producer will want to produce more of the output. This is because the higher price makes it more profitable to produce. The producer will continue to increase output until the marginal cost of production equals the price of the output.
