Richard M. Lerner, R. C. Lewontin, Benno Muller-Hill, 2010-11 The nature nurture debate continues to stir controversy in the social and behavioral sciences How much of human behavior and development can be attributed to biology and how much to the environment Can either be said to determine human development And what are the implications of each view for society In this important study a noted developmental psychologist contributes to this debate by confronting the difficult issue of doctrines of human development and the consequences for society of deriving political programs and public policy from them Beginning with the premise that scientific ideas are not neutral but can be used for either good or evil Richard Lerner considers the recent history of one such idea biological determinism which at times has had the backing of respected scientists intellectuals and political leaders During this century biological determinism has been coupled with political philosophies that hold that some people are inherently better than others This has meant that certain groups of people Jews Blacks Native Americans women have been stigmatized because of supposedly innate even biological differences with sometimes disastrous consequences The most notorious instance was Nazi Germany where racial science given legitimacy by the scientific community became a cornerstone of the Nazi Final Solution Meanwhile theories of biological determinism continue to find adherents within the scientific community Konrad Lorenz who was awarded a Nobel Prize in 1973 was a critical figure in the development of the most recent manifestation of biological determinism sociobiology Lerner examines the work of Lorenz and current sociobiologists and the implications of their claims for modern society He fears that biological determinism may again be co-opted to serve the political agenda of today's reactionary politicians In fact Lerner notes sociobiologists have had to face the fact that organizations such as the fascist National Front party in Britain and its counterparts in France and the United States have selectively seized upon sociobiology to fuel their notions of genetically superior and inferior races **Handbook of Nature-Based Drought Solutions** Saeid Eslamian, Faezeh

Eslamian, 2025-06-27 Handbook of Nature Based Drought Solutions covers the latest research on successful sustainable solutions for the efficient water resources management to overcome the drought and water scarcity problems The book centers around the realms of drought modeling green infrastructure planning and the utilization of remote sensing to evaluate dissect and oversee drought occurrences It delves into subjects such as risk mitigation strategic planning policy considerations and the ecological restoration of degraded lands after drought The use of case studies and novel methodologies including soft computing technique application will help the reader gain a deeper knowledge in understanding

predicting and mitigating hydrometeorological hazards Offers fundamental information on nature based techniques to drought management Includes case studies and methods for the successful implementation of ecological restoration of degraded lands Covers both traditional and novel techniques for the efficient water resources management to overcome drought and water scarcity problems

**World in Transition: Ways Towards Global Environmental Solutions** German Advisory Council on Global change (WBGU),2012-12-06 At the first Conference of the Parties of the Climate Convention in Berlin in Spring 1995 it became evident once again To counteract anthropogenic climate changes individuals as well as societies have to change their way of thinking and behavior This accounts for other areas of global environmental change as well Global trends like soil degradation loss of biological diversity water scarcity and population growth show little or no sign of improvement In fact in most areas a rapid deterioration has taken place In its latest Report the German Advisory Council on Global Change describes Ways Towards Global Environmental Solutions

The Climate Solutions Consensus National Council for Science and the Environment,2012-06-22 In 2007 the Intergovernmental Panel on Climate Change shared the 2007 Nobel Peace Prize with former Vice President Al Gore for its reporting on the human causes of climate change In 2008 the National Council for Science and the Environment reported that the acceleration of climate change is already faster than the IPCC projected only a year earlier How we deal with the rapid environmental changes and the human forces that are driving these changes will be among the defining issues of our generation Climate Solutions Consensus presents an agenda for America It is the first major consensus statement by the nation s leading scientists and it provides specific recommendations for federal policies for state and local governments for businesses and for colleges and universities that are preparing future generations who will be dealing with a radically changed climate The book draws upon the recommendations developed by more than 1200 scientists educators and decision makers who participated in the National Council for Science and the Environment s 8th National Conference on Science Policy and the Environment After presenting a lucid narrative of the science behind climate change and its solutions Climate Solutions Consensus presents 35

practical results oriented approaches for minimizing climate change and its impacts It clearly spells out options for technological societal and policy actions And it deals head on with controversial topics including nuclear energy ocean fertilization and atmospheric geo engineering One of the book s key conclusions is that climate solutions are about much more than energy sources They involve re examining everything people do with an eye toward minimizing climate impacts This includes our eating habits consumption patterns transportation building and housing forestry land use education and more According to these scientists the time to act is now With clarity and urgency they tell us exactly what needs to be done to start reversing the driving factors behind climate change minimizing their consequences and adapting to what is beyond our power to stop

**X-Ray and Neutron Scattering from Solutions of Biological Macromolecules** Dmitri I. Svergun, Michel H. J. Koch, Peter A. Timmins, Roland P. May, 2013-08-08 Small angle scattering of X rays SAXS and neutrons SANS is an established method for the structural characterization of biological objects in a broad size range from individual macromolecules proteins nucleic acids lipids to large macromolecular complexes SAXS SANS is complementary to the high resolution methods of X ray crystallography and nuclear magnetic resonance allowing for hybrid modeling and also accounting for available biophysical and biochemical data Quantitative characterization of flexible macromolecular systems and mixtures has recently become possible SAXS SANS measurements can be easily performed in different conditions by adding ligands or binding partners and by changing physical and or chemical characteristics of the solvent to provide information on the structural responses The technique provides kinetic information about processes like folding and assembly and also allows one to analyze macromolecular interactions The major factors promoting the increasingly active use of SAXS SANS are modern high brilliance X ray and neutron sources novel data analysis methods and automation of the experiment data processing and interpretation In this book following the presentation of the basics of scattering from isotropic macromolecular solutions modern instrumentation experimental practice and advanced analysis techniques are explained Advantages of X rays rapid data collection small sample volumes and of neutrons contrast variation by hydrogen deuterium exchange are specifically highlighted Examples of applications of the technique to different macromolecular systems are considered with specific
