PFS JSON Web Service

» Only supported way to push data into PFS database outside of the standard user interface

» Contains a utility (REST Tool) to guide developers how to interface their applications with Core LIMS database by interactively building code templates

» The code templates are request and response calls written in JSON (JavaScript Object Notation)

» Since JSON is a text format that is language independent, these code templates can then be incorporated into most developer applications

» The code templates are stateless and there are no dependencies between multiple templates
