Learning and Community Engagement Teaching Practices Management Association, Information Resources, 2021-12-30

The need for more empathetic and community focused students must begin with educators as service learning has begun to grow in popularity throughout the years. By implementing service and community aspects into the classroom at an early age, educators have a greater chance of influencing students and creating a new generation of service minded individuals who care about their communities. Teachers must have the necessary skills and current information available to them to provide students with quality service learning and community engagement curricula. The Research Anthology on Service Learning and Community Engagement Teaching Practices provides a thorough investigation of the current trends, best practices, and challenges of teaching practices for service learning and community engagement. Using innovative research, it outlines the struggles, frameworks, and recommendations necessary for educators to engage students and provide them with a comprehensive education in service learning. Covering topics such as lesson planning, teacher education, and cultural humility, it is a crucial reference for educators, administrators, universities, lesson planners, researchers, academicians, and students.

Studies on Biomarkers and New Targets in Aging Research in Iran Paul C. Guest, 2021-07-31 The Middle East is known as the cradle of civilization. It was the crossroads of ancient empires and the birthplace of major world religions. Today it is the center of many world issues due to its economic, religious, and political importance. Although it has lagged behind many other regions of the world in medicinal research, this has increased dramatically in recent years with increasing numbers of relevant publications, and the country of Iran has spearheaded this progress. Much of the research has focused on increasing our understanding of the aging process and attempting to identify biomarkers and natural products to improve the human healthspan. This book provides a comprehensive overview of the research conducted in the Middle East on the health benefits of curcumin, a phytochemical derived from the famous spice turmeric. Hundreds of studies have now been published describing the health benefits of this spice. The importance of this research is exemplified by poor data regarding health and longevity, as only 0.08% of the population in Iran consists of individuals over 90 years of age. This is approximately 10 times lower than the percentage of this same age group in the United Kingdom and the United States of America, and almost 20 times lower than that in Japan. This book presents a series of reviews and meta-studies describing research which has resulted in identification of potential new biomarkers and drug targets for age-related disorders. All of the studies have focussed on the testing of curcumin and related products which have already shown some promising leads in age-related conditions such as heart disease, diabetes, cognitive impairment, and cancer. The authors in this series come from different centers and cities of Iran, including Mashhad, Tehran, Isfahan, Ahvaz, Birjand, Quchan, and Yazd, and many of the chapters feature collaborations with other countries of the Middle East and throughout the world, including Brazil, Italy, Mexico, Oman, Poland, Switzerland, the United Kingdom, and the United States of America. This underscores the emergence of the Middle East into this arena of research. The book will be of high interest to scientific and clinical researchers in the subject of aging and age

related disease and to physicians and pharmaceutical company scientists since it gives insights into the latest strategies biomarkers and targets involved in the mechanism of action of curcumin to promote healthy aging It will also provide important information on disease mechanisms related to age related disorders as each chapter will be presented in the context of specific chronic diseases
