The Internet as a Technology-Based Ecosystem

Nigel Walton, 2017-05-04 This book examines and critiques classical approaches to strategic analysis whilst exploring alternative methods which utilise ecosystem and platform concepts as well as chaos and complexity theories The innovative

study provides a critique of the neoclassical Newtonian school of strategy and proves it to be largely inappropriate as a decision making methodology in today's internet based market. By developing a new biological hydrothermal vent model in which analogical comparisons are made with the Information Communication Technology (ICT) sector, the chapters challenge existing paradigms of competitive advantage and analyse the extent to which the Internet can be considered to be an ecosystem in its own right. The Internet as a Technology Based Eco System offers a range of alternative models and analytical frameworks for the analysis of internet based technology companies in the twenty first century, creating a valuable tool for students and academics undertaking research in strategy, technology and electronic engineering. *Proceedings of the International Conference on Social, Politics, Administration, and Communication Sciences (ICoSPACS 2022)* Yohanes Sulaiman, Elly Malihah, Mariane Olivia Delanova, 2023-09-25. Managing Sustainable Stakeholder Relationships Linda O'Riordan, 2017-09-01. This book examines corporate approaches to responsible management by investigating the stakeholder relationships between business and society. Though concepts of responsible management continue to evolve, its key objective is to explore the opportunities and dilemmas which business decision makers face when attempting to reconcile their organisation's interests with those of other stakeholder groups. In this intensely debated field, it focuses on the power of entrepreneurial purpose and the opportunities which emerge when corporate choices and actions are driven by connected stakeholder interests. A case study of the pharmaceutical industry in the UK and Germany is presented to reveal how decision makers in this particular sector are responding to their context specific management challenges. The research findings are subsequently employed to examine and revise a pre-specified stakeholder management framework which was previously developed by the author. The proposed updated framework is the book's main conceptual contribution. By depicting a set of inclusive, integrated and inter-related steps, it is intended to provide an innovative, comprehensive practical toolkit for stakeholder management. As such, it is designed to help decision makers to attain the greatest possible outcome from the resources they invest by consciously basing their choices not merely on the impacts for their shareholders but also and more holistically for a broader range of stakeholders. Ultimately, the book demonstrates how optimally harmonised stakeholder management can serve as a powerful catalyst for unlocking viable business opportunities which serve the interests of

Social media s connectivity is often thought to be a manifestation of human nature buried until now revealed only through the diverse technologies of the participatory internet Rather than embrace this view Inhuman Networks Social Media and the Archaeology of Connection argues that the human nature revealed by social media imagines network technology and data as models for behavior online Covering a wide range of historical and interdisciplinary subjects Grant Bollmer examines the emergence of the network as a model for relation in the 1700s and 1800s and follows it through marginal often forgotten articulations of technology biology economics and the social From this history Bollmer examines contemporary controversies surrounding social media extending out to the influence of network models on issues of critical theory politics popular science and neoliberalism By moving through the past and present of network media Inhuman Networks demonstrates how contemporary network culture unintentionally repeats debates over the limits of Western modernity to provide an idealized

future where the human is interchangeable with abstract flowing data connected through well managed distributed networks
