

Solutions to Chapter 2 (Note: solution to Problem 62 to be added)

1. Explain how the notion of layering and internetworking make the rapid growth of applications such as the World Wide Web possible.

Solution:

Internetworking allows many component networks each with different underlying technology and operation to work together and form one large network. As new network technologies are introduced they can be readily incorporated into the Internet. This provides the ubiquitous connectivity for applications like WWW.

The layering concept hides the specific underlying network technology from the upper layers and provides a common networking platform. Using the communication service provided by the layers below, new applications can be introduced independently and at a rapid rate.

2. (a) What universal set of communication services is provided by TCP/IP?

Solution:

The TCP/IP protocol stack provides two basic types of communications services through its two transport layer protocols: TCP provides reliable connection-oriented transfer of a byte stream; UDP provides for best-effort connectionless transfer of individual messages. TCP/IP provides with globally unique logical addressing that enables machines connected to the Internet to access these two services. The IP addressing scheme is very scalable because of its hierarchical structure.

2. (b) How is independence from underlying network technologies achieved?

Solution:

The two basic communications services provided by TCP and UDP are built on the connectionless packet transfer service provided by the Internet Protocol (IP). Many network interfaces are defined to

The Network Challenge (Chapter 22) Howard Kunreuther, 2009-05-19 Networks increase interdependencies which creates challenges for managing risks This is especially apparent in areas such

as security and enterprise risk management where the actions of a single player in an interconnected network can wreak havoc on everyone in the network The network in this case is only as strong as its weakest link There are related problems in encouraging investments for prevention and protection because the expected payoffs from such measures by one player are affected by the actions of other players in the network This chapter examines the challenges of interdependent security IDS and strategies for addressing these including coordination with broader networks such as industry organizations and government
