Where Do Cities Come From and Where Are They Going To? Modelling Past and Present Agglomerations to Understand Urban Ways of Life Francesca Fulminante, John William Hanson, Scott G. Ortman, Luis M. A. Bettencourt, 2021-01-25 Over the last decade there has been a surge of interest in urbanization and economic development sparked by the realization that making urban life sustainable is one of the greatest challenges facing us in the 21st century this is now one of the core sustainable development goals of the United Nations This has exerted considerable pressure on researchers to come up with more scientific ways of studying urbanism and economic activity over the long run which has resulted not only in the development of new theoretical frameworks but also in the collection of vast amounts of data from a range of settings This has led to the realization that although there are significant differences between settlements in different settings there are nonetheless important regularities and commonalities between a diverse group of settlements in range of geographical and historical contexts including both ancient and modern ones This suggests that a common feature of settlements is their ability to generate

increased social connectivity greater division of labour and specialization and enhanced technological invention and innovation albeit with costs to levels of equality quality of life and standards of living as well as impacts on the environment which cannot be separated from the emergence of confederations and states and the creation of settlement systems hierarchies and networks We believe that this field of enquiry now stands at a critical juncture Although it is now feasible to talk about many aspects of ancient and modern urbanism with relative confidence such as the numbers of cities or their sizes much of the discussion of these themes within historical and archaeological circles has been on a discursive or qualitative level while it is often difficult to harmonize the different models that have been applied to date into a consistent empirical and theoretical framework A new approach to settlements throughout different contexts should now be within our grasp however thanks to both the ease with which information can be disseminated and the facilities that recent developments in IT offer us to model analyse and statistically test data

Long History, Deep Time Ann McGrath, Mary Anne Jebb, 2015-08-17 The vast shape shifting continent of Australia enables us to take a long view of history We consider ways to cross the great divide between the deep past and the present Australia s human past is not a short past so we need to enlarge the scale and scope of history beyond 1788 In ways not so distant these deeper times happened in the same places where we walk today Yet they were not the same places having different surfaces ecologies and peoples Contributors to this volume show how the earth and its past peoples can wake us up to a sense of place as history as a site of both change and continuity This book ignites the possibilities of what the spaces and expanses of history might be Its authors reflect upon the need for appropriate feasible timescales for history pointing out some of the obstacles encountered in earlier efforts to slice human time into thematic categories Time and history are considered from the perspective of physics archaeology literature western and Indigenous philosophy Ultimately this collection argues for imaginative new approaches to collaborative histories of deep time that are better suited to the challenges of the Anthropocene Contributors to this volume including many leading figures in their respective disciplines consider history s temporality and ask how history might expand to accommodate a chronology of deep time Long histories that incorporate humanities science and Indigenous knowledge may produce deeper meanings of the worlds in which we live

The Handbook of Historical Economics Alberto

Bisin, Giovanni Federico, 2021-04-21 The Handbook of Historical Economics guides students and researchers through a quantitative economic history that uses fully up to date econometric methods The book s coverage of statistics applied to the social sciences makes it invaluable to a broad readership As new sources and applications of data in every economic field are enabling economists to ask and answer new fundamental questions this book presents an up to date reference on the topics at hand Provides an historical outline of the two cliometric revolutions highlighting the similarities and the differences between the two Surveys the issues and principal results of the second cliometric revolution Explores innovations in formulating hypotheses and statistical testing relating them to wider trends in data driven empirical economics The Logarithmic Nature of Time Michael A. Susko, 2024-12-27 The two works collated here encompass a vast time from the start of life until the dawn to what we refer to as civilization In the first volume a consistent logarithmic pulsing was found in biological evolution from life s beginning to the first humans The evidence for these first ten nodes was primarily fossils or other life signatures in a given setting The second volume continues the logarithmic patterning with human evolution even after the change is primarily occurring in the symbolic domain Here the evidence increasingly becomes geometric objects fashioned by humans which became tools and symbols as well as red ochre used to decorate and signify a charged object for use in ritual Basically what we mean by logarithmic patterning is that we are halving the units from the past to the future such as 4 Gyr to 2 Gyr to 1 Gyr billions of years then moving on to 500 Myr 250 Myr and on millions of years Here a base two with exponents were used to half units and identify more refined points What we consistently found was evidence for increasingly complexity an acceleration of events logarithmically such that Major Change kept happening in less time or more precisely half the time as the previous change That means that change occurred in pulsed logarithmic intervals I have attempted to why this happens but that is better left for another work For now we leave this task largely to readers to wonder about and make their own theories We will however take on the humble and diligent task of assembling the evidence and ordering it on a logarithmic scale Such as a scale can be updated and I have begun some of that process What I found was that new evidence surfacing was increasingly confirming of the logarithmic structuring outlined here We will let you judge yourself as to how sufficient the evidence is and what that might say about the universe It is an exciting process and one which can only be in process to be continually updated and refined by others such as yourself Let us then discover together Annual Report of the Council of the Historical Association ... and Other Documents Historical Association (Great Britain), 1928 **A History of Western Public Law** Bruno Aguilera-Barchet, 2014-12-31 The book outlines the historical development of Public Law and the state from ancient times to the modern day offering an account of relevant events in parallel with a general historical background establishing and explaining the relationships between political religious and economic events Documents of the Senate of the State of New York New York (State).
