1.) Label the neuron.

2.) Color the diagram as suggested below.

3.) There are three different kinds of neurons or nerve cells. Match each kind with its function.

**Motor Neuron:** The nerve cell that transmits impulses from the brain or spinal cord to a muscle or gland.

**Sensory Neuron:** The nerve cell that carries impulses from a sense receptor to the brain or spinal cord.

**Relay Neuron:** The nerve that connects sensory and motor neurons.

**Match term with description:**

**Synapse -** The connection between adjacent neurons.

**Axon -** The long fiber that carries the nerve impulses.

in screening technology ion channel structure and modelling and up to date case histories of the discovery of modulators of a range of channels both voltage gated and non voltage gated channels The editors have built an extensive network of contacts in the field through their first hand scientific experience collaborations and conference participation and the organisation of the meeting at Novartis Horsham increased the network enabling the editors to draw on the experience of eminent researchers in the field Interest and investment in ion channel modulation in both industrial and academic settings continues to grow as new therapeutic opportunities are identified and realised for ion channel modulation This book provides a reference text by covering a combination of recent advances in the field from technological and medicinal chemistry perspectives as well as providing an introduction to the new ion channel drug discoverer The book has contributions from highly respected academic researchers industrial researchers at the cutting edge of drug discovery and experts in enabling technology This combination provides a complete picture of the field of interest to a wide range of readers **Study Guide**
