

## Solutions to Chapter 8

**8.1.** The IP header checksum only verifies the integrity of IP header. Discuss the pros and cons of doing the checksum on the header part versus on the entire packet.

**Solution:**

Error checking in the header is more important because the packet is routed according to the header information. In addition, the delivery of the data at the destination to the higher layers also requires the header information. Thus error checking of the header protects against misdelivery of the information. Restricting the error checking to the header also simplifies the implementation in the nodes, requires less checksum bits, and prevents unnecessary packet discard. Some higher layers can tolerate some data errors, and higher layers also have the option of performing retransmission.

**8.2.** Identify the address class of the following IP addresses: 200.58.20.165; 128.167.23.20; 16.196.128.50; 50.156.10.10; 250.10.24.96.

**Solution:**

An IP address has a fixed length of 32 bits, where the most significant bits identify the particular class. Therefore, to identify the address class we need to convert the dotted-decimal notation back into its binary counterpart, and compare the binary notation to the class prefixes shown in Figure 8.5 in the text. (Recall that the dotted-decimal notation was devised to communicate addresses more readily to other people. In this notation, the 32 bits are divided into four groups of 8 bits – separated by periods – and then converted to their decimal counterpart.) The first few bits (shown in red) of the address can be used to determine the class.

Graessley, 2024-11-01 Polymeric

Liquids Networks Dynamics and Rheology is the second part of a two volume treatise serving as a status report on a broad area of polymer science research. It represents an effort to unify and consolidate the work of many polymer researchers from all over the world over the past 60-70 years. Both books are based on the graduate courses taught by the author at Princeton and Northwestern. The increasing need to apply new understandings about liquid structure to rheological behavior squeezed equilibrium aspects out of the rheology course and into another graduate course which eventually became the basis for Volume 1: Structure and Properties published in 2004. Volume 2 follows the original plan by building upon Volume 1, covering continuum background along with experimental observations, then molecular theories and applications to such topics as solution properties, long chain branching, and structural heterodispersity. Dynamics and Rheology aims to leave readers with a solid grounding in the principles that underlie the dynamics and rheological behavior of flexible chain polymer liquids and networks. Readers will develop an informed, intuitive understanding of the connections between polymeric structure and rheological response. Theory, experiment, and simulation are woven together so as to leave the reader with a balanced grasp of the various areas, including exposure to important unsolved puzzles. The book will be a great resource for a range of academic researchers in chemistry, physics, materials science, and chemical engineering.

**Building DMZs For Enterprise Networks** Syngress, 2003-08-04. This book covers what an administrator needs to plan out and integrate a DMZ into a network for small, medium, and Enterprise networks. In most enterprises, the perception is that a firewall provides a hardened perimeter. However, the security of internal networks and hosts is usually very soft. In such an environment, a non-DMZ system that is offering services to the Internet creates the opportunity to leapfrog to other hosts in the soft interior of your network. In this scenario, your internal network is fair game for any attacker who manages to penetrate your so-called hard perimeter. There are currently no books written specifically on DMZs. This book will be unique in that it will be the only book that teaches readers how to build a DMZ using all of these products: ISA Server, Check Point, NG Cisco Routers, Sun Servers, and Nokia Security Appliances. Dr. Thomas W. Shinder is the author of the best-selling book on Microsoft's ISA: Configuring ISA Server 2000. Customers of the first book will certainly buy this book.

Challenges and Opportunities of Connected K-Covered Wireless Sensor Networks Habib M. Ammari, 2009-08-10. Wireless sensor networks have received significant attention because of their important role and many conveniences in our lives. Indeed, the recent and fast advances in inexpensive sensor technology and wireless communications have made the design and development of large-scale wireless sensor networks cost-effective and appealing to a wide range of mission-critical situations, including civilian, natural, industrial, and military applications such as health and environmental monitoring, seismic monitoring, industrial process automation, and battlefields surveillance, respectively. A wireless sensor network consists of a large number of tiny, low-powered devices called sensors which are randomly or deterministically deployed in a field of interest while collaborating and coordinating for the successful accomplishment of their mission. These sensors suffer from very scarce resources and capabilities such as

bandwidth storage CPU battery power or energy sensing and communication to name a few with energy being the most critical one The major challenge in the design process of this type of network is mainly due to the limited capabilities of the sensors and particularly their energy which makes them unreliable This book aims to develop a reader's thorough understanding of the opportunities and challenges of  $k$ -covered wireless sensor networks where each point in a deployment field is covered or sensed by at least  $k$  sensors Following Ren Descartes most elegant methodology of dividing each difficulty into as many parts as might be possible and necessary to best solve it Discours de la Method 1637 this book presents a variety of theoretical studies based on percolation theory and computational geometry as well as protocols that lead to the design of a unified framework where connected  $k$ -coverage sensor scheduling and data routing and dissemination are jointly considered
