

The Behavior of Waves

- **Constructive** – the waves add together
 - The amplitude of the new wave is equal to the sum of the amplitudes of the interfering waves
- **Destructive** – the waves subtract from each other as they overlap
 - Occurs crest of one wave overlaps the trough of the second wave

Standing wave – a wave pattern that forms when wave equal in wavelength and amplitude, but traveling in opposite directions, constructively interfere

- **Nodes** – points on a standing wave where the two waves cancel and no movement occurs
- **Antinodes** – points on a standing wave where movement is at a maximum

Resonance – the ability of an object to vibrate by absorbing energy at its natural frequency

- In the case of sound waves, the sound gets louder
