Cabral, 1987-01-01 During the past twenty years the immobilisation of enzymes and cells has developed into a major topic of theoretical and practical importance This technology unites the disciplines of chemistry biochemistry and cell biology on one hand with biochemical and process engineering on the other As well as having an importance in its own right its use has already made an impact on downstream processing of biochemicals In this handbook the authors who are experts in their field bring together for the first time in a single volume information on the techniques of immobilisation and the uses of the immobilised enzymes and cells They provide an overview of the subject as well as practical guidance on the choice and relative merits of many techniques Carefully selected examples taken from the literature illustrate the general principles The balance between theory and practice provides a text which will introduce the topic to research students and also provide a source of practical details on efficient immobilisation methods for workers who s only interest is in exploiting the methods in their particular field This is primarily a laboratory book and as such it should be found dog eared and stained on a laboratory bench rather than gathering dust on a library shelf Key references are given to enable the reader to explore the literature in depth Information is also supplied on journals enzyme and equipment suppliers *Immobilization of Enzymes and Cells* José M. Guisán, 2008-02-05 Enzymes and whole cells are able to catalyze the most complex chemical processes under the most benign experimental and environmental conditions In this way enzymes and cells could be excellent catalysts for a much more sustainable chemical industry However enzymes and cells also have some limitations for nonbiological applications fine chemistry food chemistry analysis therapeutics and so on Enzymes and cells may be unstable difficult to handle under nonconventional conditions poorly selective toward synthetic substrates and so

forth From this point of view the transformation from the laboratory to industry of chemical processes catalyzed by enzymes and cells may be one of the most complex and exciting goals in biotechnology For many industrial applications enzymes and cells have to be immobilized via very simple and cost effective protocols in order to be re used over very long periods of time From this point of view immobilization simplicity and stabilization have to be strongly related concepts Over the last 30 years a number of protocols for the immobilization of cells and enzymes have been reported in scientific literature However only very few protocols are simple and useful enough to greatly improve the functional properties of enzymes and cells activity stability selectivity and related properties

Immobilized Enzymes in Medicine Vladimir P. Torchilin, 2012-12-06 The application of immobilized enzymes in medicine is the main objective of this book The author reviews natural and synthetic carriers for enzyme immobilization chemistry of enzyme binding and in vitro and in vivo properties of immobilized enzymes Four chapters are dedicated to clinical use of immobilized enzymes

Immobilization of Enzymes and Cells Jose M. Guisan, Juan M. Bolivar, Fernando López-Gallego, Javier Rocha-Martín, 2020-01-15 This fourth edition volume expands on the previous editions with new insights on important aspects to take into accounting when immobilizing enzymes and cells illustrating outstanding examples that support those aspects and exploring ways to fabricate and characterize heterogeneous biocatalysts including both immobilized enzymes and cells The transformation of soluble and usually instable enzymes into heterogeneous and highly stable biocatalysts is strongly emphasized The chapters in this book cover topics such as the importance of enzyme orientation on the support surface application and characterization of immobilized enzymes different functionalization chemistries for the modulation of the immobilized enzyme properties co immobilization of multi enzyme systems new analytical techniques for the characterization of heterogeneous biocatalysts protocols for cell entrapment in alginate preparation and characterization of biofilms and cell encapsulation technologies Written in the highly successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Cutting edge and authoritative Immobilization of Enzymes and Cells Methods and Protocols Fourth Edition is a valuable resource for researchers interested in expanding their knowledge of this developing field

Immobilized Enzymes in Food and Microbial Processes Alfred Olson, 2013-11-11

In the last five years the potential value of immobilized enzymes has captured the imagination of an increasing number of scientists and engineers The concept of being able to create an immobilized derivative of an enzyme which has long term stability and is able to be recovered and reused is fascinating to say the least Since the industrial application of enzymes has

been mostly in the food and microbial process industry it is not surprising that many of the applications of immobilized enzymes considered for commercial development fall within the area of this industry It is for this reason that we organized a symposium on immobilized enzymes for the 166th National Meeting of the American Chemical Society Appropriately the symposium was jointly sponsored by the Division of Agricultural and Food Chemistry and the Division of Microbial Chemistry and Technology Although there were at least half a dozen symposia at other meetings on various aspects of immobilized enzyme technology in the preceding ten months none had specifically addressed themselves to food and microbial processes and none had been held at a meeting such as the National ACS gathering which is not only large but multidisciplinary The enthusiastic response to this symposium prompted us at the invitation of Plenum Press to publish the proceedings of this symposium

Pitcher,2019-08-08 Much has been written about immobilized enzymes during this period of time So much in fact that it can become difficult even for those involved in developing new enzymatic food processing operations to bridge the gap between the field of immobilized enzymes and their specific requirements It is the purpose of this book to assist those engaged in this difficult task It is also a goal to bring to the researcher in enzyme immobilization an appreciation for the requirements of the food processing industry

Enzyme Immobilization Rowan Austin,2018-12-19 An enzyme is a protein or protein complex that catalyses a chemical reaction Like any catalyst enzymes work by lowering the activation energy of a reaction thus allowing the reaction to proceed to its steady state or completion much faster than it otherwise would the enzyme remains unaltered by the completed reaction and can therefore continue catalysis An immobilized enzyme is an enzyme attached to an inert insoluble material such as calcium alginate This can provide increased resistance to changes in conditions such as pH or temperature It also lets enzymes be held in place throughout the reaction following which they are easily separated from the products and may be used again a far more efficient process and so is widely used in industry for enzyme catalysed reactions An alternative to enzyme immobilization is whole cell immobilization Carrier matrices for enzyme immobilisation by adsorption and covalent binding must be chosen with care The manufacture of high valued products on a small scale may allow the use of relatively expensive supports and immobilisation techniques whereas these would not be economical in the large scale production of low added value materials A substantial saving in costs occurs where the carrier may be regenerated after the useful lifetime of the immobilised enzyme This book is simple protocols for the immobilization of enzymes and cells that could be useful for application at industrial scale novel protocols for immobilization in the future and new chemical reactors able to overcome the limitations of a number of immobilized derivatives
