G. Holt, Clive Cockram, Allan Flyvbjerg, Barry J. Goldstein, 2011-07-26 Over three editions the Textbook of Diabetes has built a reputation as a book that is extremely well organized and easy to navigate with exceptional illustrations and an excellent blend of clinical and scientific content Previously edited by John Pickup and Gareth Williams this fourth edition has four brand new editors from across the globe The editors have assembled an outstanding set of international contributors who provide insight on new developments in diabetes care and information on the latest treatment modalities used around the world The new Textbook of Diabetes has been restructured into 12 parts in one accessible volume and is designed with the busy diabetes care team in mind As well as retaining the elements that have made it such a popular brand such as the outstanding full colour illustrations and text design the new edition sees even greater emphasis on the clinical aspects of diabetes with new chapters on managing

patients with diabetes the treatment of diabetes and the delivery and organization of diabetes care including Non insulin parenteral therapies New technologies for insulin administration and glucose monitoring The role of the multidisciplinary team There is also a companion website accompanying the book containing essential bonus material such as Over 150 interactive MCQ s to help you improve and test your clinical knowledge All 500 figures from the book in a downloadable format to use in slides and presentations Chapter pdfs and chapter references with full links to PubMed If you want a modern well illustrated international guide to diabetes this is the ideal reference book for you

The Present and Future of Immunology Education Andrea Bottaro, Deborah M. Brown, John Gregory Frelinger, 2022-01-24 The explosion of basic and applied immunology in the first decades of the 21st century has brought forth new opportunities and challenges for immunology education at all academic levels from professional to undergraduate medical graduate and post graduate instruction Moreover developing methods and techniques for educating general audiences on the importance and benefits of immunology will be critical for increasing public awareness and support One major immediate challenge consists in accommodating within the confines of traditional immunology curricula a body of knowledge that continues to grow exponentially in both size and complexity Furthermore the practical toolbox of immunological research has vastly expanded and even in the present environment of highly interdisciplinary and collaborative science future immunologists will likely need to be at least conversant in for instance computational structural and system biology nanotechnology and tissue engineering At the same time our perspective of the immune system has progressively developed from primarily a host defense mechanism to a fundamental homeostatic system with organism wide physiological and clinical significance and with potentially transformative biotechnological and therapeutic applications As a consequence in addition to stand alone courses immunology is increasingly integrated into other courses or distributed longitudinally throughout a multi year curriculum This necessitates inter disciplinary approaches to reach an expanding range of disciplines as diverse as neurobiology cancer biology oncology infectious diseases pharmacology orthopedics and bioengineering Creative approaches and pedagogical flexibility will be needed to avoid the pitfall of one size fits all instruction and to tailor level and discipline appropriate content to different types of students using multiple teaching formats Finally like most other disciplines immunology education is also under strong pressure to introduce new didactic strategies that are relevant and meaningful to a generation of students who are digital natives comfortable with and expect on demand and multi modal learning diversified sources and active engagement Thankfully the dynamic and interactive behavior of immune system cells now visualized with striking immediacy by in vivo imaging has the ability to capture and hold the interest of even the most jaded learner The need for an increasingly immunology knowledgeable workforce not just academic and industry scientists but also clinical and research lab technicians biomedical engineers and physicians in a growing array of specialties will also expand job opportunities for immunologists as educators and for content creators dedicated to generating new didactic tools in this field

Rules and Exceptions in Biology: from Fundamental Concepts to Applications Alfredo V. Peretti, Lucía S. Calbacho-Rosa, Paola A. Olivero, Mariela A.

Oviedo-Diego, David E. Vrech, 2024-05-17 This is the first book to cover and explore the rules and exceptions in biology It presents past and current perspectives on the subject and discusses the various situations of transition from rule to exception and vice versa In doing so the book fills a gap in the scientific literature and stimulates useful and valuable discussions among researchers working in biology worldwide The chapters begin with a theoretical framework followed by the main topics or questions and a summary of previous work on the topic Examples are discussed with concluding remarks and suggestions for future research A section with key concepts is included at the end of each chapter allowing the reader to jump directly to the most important findings or observations Each chapter is written to be used as a reference by graduate students and professionals from a variety of scientific disciplines e g behavior ecology evolution and systematics

Human By Nature Peter Weingart, Sandra D. Mitchell, Peter J. Richerson, Sabine Maasen, 2013-06-17 Representing a wide range of disciplines biology sociology anthropology economics human ethology psychology primatology history and philosophy of science the contributors to this book recently spent a complete academic year at the Center for Interdisciplinary Research ZiF discussing a plethora of new insights in reference to human cultural evolution These scholars acted as a living experiment of interdisciplinarity in vivo The assumption of this experiment was that the scholars while working and residing at the ZiF would be united intellectually as well as socially a connection that might eventually enhance future interdisciplinary communication even after the research group had dispersed An important consensus emerged The issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural and hence to the disciplinary division of scientific labor The appropriate place for the study of human culture in this group's view is located between biology and the social sciences Explicitly avoiding biological and sociological reductionisms the group adopted a pluralistic perspective integrative pluralism that took into account both today's highly specialized and effective subdisciplinary research and the possibility of integrating the respective findings on a case by case basis Each sub group discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of several types of fruitful cooperation such as a fully integrated chapter a multidisciplinary overview or a discussion between different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human culture this book will be of interest to social scientists and biologists alike
