Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP), for identifying the crime scene DNA sample. First, we'll go to the subject matter explained in the text that this simulation may help to understand better.

Design the test

After sampling, you will go to the next laboratory technique: the analysis of DNA. You will learn by using a technique called electrophoresis, and this will identify the source of the crime scene. It is up to you to make the correct sample accordingly the PCR experiment.

Read the structure of DNA sample explanation as offered

In the simulation, you will see the PCR experiment on the computer lab, illustrating the structure of DNA and the explanation of the technique will be used throughout the experimental process. As well as an explanation of the test itself.

Identify the samples

In the PCR simulation, you will collect your samples and other needed samples from the laboratory and you will make samples the polymerase chain reaction. This will be the structure of the structure.

Learning Objectives

In this part of the simulation, you will see the objectives:

1. Identify the function of each polymerase chain reaction and electrophoresis.
2. Explain the PCR experiment using the text, facts, or facts found in the simulation.
